**Management** August-Wilhelm Scheer, 2012-12-06 The first edition of this book appeared in the Federal Republic of Germany in 1984 and in English translation as *Computer A Challenge for Business Administration* in 1985 This book which is a translation of the fourth Gennan edition has been comprehensively revised As a result both the character and the expected audience of the book have changed which is reflected in the alteration to the title This book addresses itself to issues arising from the research areas of both information systems and computer science Computer science departments are primarily concerned with the development of EDP techniques and the business economics aspects remain largely Ignored The emphasis in information systems departments is placed on the investigation of the business economic impact of the use of already existing systems This strongly empirical approach is accompanied by a disinclination to consider actual system design this is considered the responsibility of the software houses This partitioning however leaves untapped the considerable potential which could be realized by an interdisciplinary approach from computer science and business economics An isolated approach neglects both the effects that business economics can have on the implementation of EDP techniques and the structural impact of EDP on business economics *Information Security* Javier Lopez, Chris J. Mitchell, 2015-08-27 This book constitutes the refereed proceedings of the 18th International Conference on Information

Security ISC 2015 held in Trondheim Norway in September 2015 The 30 revised full papers presented were carefully reviewed and selected from 103 submissions The papers cover a wide range of topics in the area of cryptography and cryptanalysis and are organized in the following topical sections signatures system and software security block ciphers protocols network and cloud security encryption and fundamentals PUFs and implementation security and key generation biometrics and image security
