ADA Pocket Guide to Eating Disorders Jessica Setnick, 2011 The simple format of this basic overview of eating disorders makes it easy to locate pertinent components of medical nutrition therapy care of patients with eating disorders The purpose is to give registered dietitians a starting point to provide medical nutrition therapy for patients with eating disorders As the author notes no single book can deliver all the necessary information regarding eating disorders but this pocket guide can provide a basic foundation The book is written for registered dietitians RDs who will be assessing the nutritional status of patients with eating disorders While this book is best suited for RDs it could be a good review for other healthcare professionals who are interested in understanding the detail required to adequately assess eating disorder patients and the time needed for successful nutrition intervention As a pocket guide the format tends toward bullet points and text boxes of useful information and it is easy to quickly locate what you need Half of the book focuses on nutrition assessment and the many components that the RD needs to take into consideration The other half focuses on the various interventions meal planning methodologies nutrition education interventions and nutrition counseling interventions Many tables and text boxes convey the information One text box presents meal and snack plans that would be appropriate for eating disorders Another text box is devoted to guidelines for food interventions Although the book has no color copy or photos the intent is not to visually stimulate but to disseminate the appropriate information in a quick and easy manner This is an essential guide for RDs to have as a reference while all healthcare professionals interested in understanding what medical nutrition therapy with eating disorders entails could benefit Amy Hess Fischl MS RD LDN BC ADM CDE University of Chicago Medical Center

Geriatric Stephen Bartlett, Mary Marian, Douglas Taren, Myra L. Muramoto, 2012-12-06 The older population defined as those 65 years and older has been steadily increasing as a percentage of the total population since 1900 Currently it constitutes 13% of the population The United States Bureau of the Census predicts that the elderly will represent 20% of the U S population by 2030 The older population itself is getting older with greatest percentage increases in the subgroup of elderly over 85 years of age This segment of the elderly is now 28 times greater in number than in 1900 The aging process is associated with unique medical problems including declining functional capacities and physiological reserves that have spawned specialization in geriatric medicine While healthy free living elderly appear not much more at nutritional risk than the rest of the population the elderly who suffer from illness or other stress have a much

higher incidence of nutritional problems than the population as a whole Elderly are also more heterogeneous than the general population resulting in a greater variation in nutritional requirements which requires a better understanding of how nutrition and health interact This brings nutritional assessment and care to the forefront of geriatric medical practice
