

Back-to-School FOOD SAFETY TIPS

Chances are you worry more about whether your children will eat the food in their lunch boxes than about whether that food will be safe to eat. But children are the most vulnerable to food poisoning, so it makes sense to take extra precautions when preparing the lunches they take to school.

1 IN 6 Approximate number of Americans stricken with food poisoning each year

128,000

Estimated annual hospitalizations from foodborne illnesses

42,000

Estimated annual reports of salmonella infections, the most frequent cause of foodborne illnesses

Of the estimated 42,000 annual salmonella infections, almost

50%

of these are infants and school-age children.

Because many milder cases are not diagnosed or reported, the actual number of salmonella infections may be 25 or more times greater. That's more than

1.2 MILLION estimated cases annually.

Tips to keep your kids healthy

CLEAN

If you're making lunch the night before, be sure to wash your hands and use clean cutting boards, utensils and countertops. Making lunch on the same surfaces you used to prepare raw meat or poultry for dinner may result in cross-contamination and lead to salmonella-related illness.

SEPARATE

Use one cutting board for fresh produce and a separate one for meat and poultry.

COOK

Cook foods to the right temperature using a food thermometer.

CHILL

If the lunch contains perishable food items like lunchbox meats, eggs, and yogurt, make sure to pack it with at least two cold sources (e.g., freezer packs and frozen water bottles).

Pack a Safe Lunch

Send your kids back to school with safe and satisfying lunches by following these simple tips:

Tip 1

Frozen juice boxes can also be used as freezer packs. By lunchtime, the juice should be thawed and ready to drink!

Tip 2

Perishable food can be unsafe to eat by lunchtime if packed in a paper bag. Use an insulated box or bag instead.

Tip 3

Children should wash their hands for 20 seconds with warm soapy water before eating. Have them sing the ABCs twice while washing if they sometimes finish early.

Tip 4

If possible, your child's lunch should be stored in a refrigerator. But leave the lid of the lunchbox or an insulated, soft-sided bag open in the fridge so that cold air can circulate and keep the food cold.

Tip 5

If you're packing a hot lunch, like soup, chili or stew, use an insulated container to keep it hot. Fill the container with boiling water, let stand for a few minutes, empty, and then put in the piping-hot food. Tell your child to keep the insulated container closed until lunchtime to keep the food hot — HOT or above.

Tip 6

After lunch, discard all leftover food, used food packaging, and paper bags. Do not reuse packaging because it could contaminate other food.

Managing Food Safety and Hygiene Bridget M. Hutter, 2011-01-01 One of the most thorough and considered studies we have of the relationship between regulation and business risk management practices Food regulation provides a revealing canvas for understanding the dynamics of the governance of risk John Braithwaite Australian National University Food safety and hygiene is of critical importance to us all yet as periodic food crises in various countries each year show we are all dependent on others in business and public regulation to ensure that the food we consume from food in the retailing and hospitality sectors is safe Bridget Hutter considers the understandings of risk and regulation held by those in business and considers the compliance pressures on managers and owners and how these relate to understandings of risk and uncertainty Using data from an in depth case study of the food retail and catering sectors in the UK the research investigates how business risk management practices are influenced by external pressures such as state regulation consumers insurance and the media and by pressures within business The argument of the book is that food businesses in the UK are generally motivated to manage risk They realize that good risk management aligns with good business practice However there are challenges for an industry that is highly segmented in terms of risk management capacity The findings have implications for contemporary risk regulation in the increasingly number of countries that rely on self regulation *Managing Food Safety and Hygiene* will prove invaluable for academic researchers and students in risk regulation studies business studies food studies organizational studies social psychology socio legal studies sociology management public administration and political science In addition the book will also appeal to practitioners specifically to senior policy makers regulators and business risk managers charged with managing risk in diverse organizational settings and across different functional jurisdictions

Food Safety Culture Frank Yiannas,2008-12-10 Food safety awareness is at an all time high new and emerging threats to the food supply are being recognized and consumers are eating more and more meals prepared outside of the home Accordingly retail and foodservice establishments as well as food producers at all levels of the food production chain have a growing responsibility to ensure that proper food safety and sanitation practices are followed thereby safeguarding the health of their guests and customers Achieving food safety success in this changing environment requires going beyond traditional training testing and inspectional approaches to managing risks It requires a better understanding of organizational culture and the human dimensions of food safety To improve the food safety performance of a retail or foodservice establishment an organization with thousands of employees or a local community you must change the way people do things You must change their behavior In fact simply put food safety equals behavior When viewed from these lenses one of the most common contributing causes of food borne disease is unsafe behavior such as improper hand washing cross contamination or undercooking food Thus to improve food safety we need to better integrate food science with behavioral science and use a systems based approach to managing food safety risk The importance of organizational culture human behavior and systems thinking is well documented in the occupational safety and health fields However significant contributions to the scientific literature on these topics are noticeably absent in the field of food safety **107-2 Hearings:**
