Sustainability assessment of concrete bridge deck designs in coastal environments using neutrosophic criteria weights Ignacio J. Navarro, Victor Yepes, Jose V. Mart, Essential infrastructures such as bridges are designed to provide a long lasting and intergenerational functionality In those cases sustainability becomes of paramount importance when the infrastructure is exposed to aggressive environments which can jeopardise their durability and lead to significant maintenance demands The assessment of sustainability is however often complex and uncertain The present study assesses the sustainability performance of 16 alternative designs of a concrete bridge deck in a coastal environment on the basis of a neutrosophic group analytic hierarchy process AHP The use of neutrosophic logic in the field of multi criteria decision making as a generalisation of the widely used fuzzy logic allows for a proper capture of the vagueness and uncertainties of the judgements emitted by the decision makers TOPSIS technique is then used to aggregate the different sustainability criteria From the results it is derived that only the simultaneous consideration of the economic environmental and social life cycle impacts of a design shall lead to adequate sustainable designs Choices made based on the optimality of a design in only some of the sustainability pillars will lead to erroneous conclusions The use of concrete with silica fume has resulted in a sustainability performance of 46 3% better than conventional concrete designs
