Manly,L. McDonald,D.L. Thomas,Trent L. McDonald,Wallace P. Erickson,2007-05-08 We have written this book as a guide to the design and analysis of field studies of resource selection concentrating primarily on statistical aspects of the comparison of the use and availability of resources of different types Our intended audience is field ecologists in general and in particular wildlife and fisheries biologists who are attempting to measure the extent to which real animal populations are selective in their choice of food and habitat As such we have made no attempt to address those aspects of theoretical ecology that are concerned with how animals might choose their resources if they acted in an optimal manner The book is based on the concept of a resource selection function RSF where this is a function of characteristics measured on resourceunits such that its value for a unit is proportional to the probability of that unit being used We argue that this concept leads to a unified theory for the analysis and interpretation of data on resource

selection and can replace many ad hoc statistical methods that have been used in the past **Contemporary Psychometrics** Albert Maydeu-Olivares,John J. McArdle,2005-05-06 Contemporary Psychometrics features cutting edge chapters organized in four sections test theory factor analysis structural equation modeling and multivariate analysis The section on test theory includes topics such as multidimensional item response theory IRT the relationship between IRT and factor analysis estimation and testing of these models and basic measurement issues that are often neglected The factor analysis section reviews the history and development of the model factorial invariance and factor analysis indeterminacy and Bayesian inference for factor scores and parameter estimates The section on structural equation modeling SEM includes the general algebraic graphic rules for latent variable SEM a survey of goodness of fit assessment SEM resampling methods a discussion of how to compare correlations between and within independent samples dynamic factor models based on ARMA time series models and multi level factor analysis models for continuous and discrete data The final section on multivariate analysis includes topics such as dual scaling of ordinal data model specification and missing data problems in time series models and a discussion of the themes that run through all multivariate methods This tour de force through contemporary psychometrics will appeal to advanced students and researchers in the social and behavioral sciences and education as well as methodologists from other disciplines **Medical Book Guide** ,1974 **Elements of Statistical Computing** R.A.
