Word Question (10 marks)

1. Type following paragraph correctly

(3)

What is Network

Network used to interconnect computers in a single room, rooms inside a building or buildings are normally called local area networks (LANs). LANs normally transmit data in a digital form using media such as coaxial cable or multithreaded cable. Local Area Network can be used only on one site of a building. The terminals and workstations are able to connect either one of the 'two' host computers when required.

The network has a file server and a print server. The file server is a special computer which provides a form of auxiliary storage that can be used by any other computer on the network. The print server is a special printer which can receive data form other computers on the network and print it. It is possible to connect external communications server on the LAN with a device which makes the communication possible between the equipment of the network and system elsewhere, e.g. modem.

For example, in IT department of Nepal Electricity Authority, there are more than 30 computers working at the same time. The authority can get the information about whatever is being operated in any computer. All things can be connected with the file server.
