riding out a probationary rap from Siege management One more screw up and he ll be bounced down to the minors or dropped from the team sending him out of the city he loves and costing him the chance at postseason redemption But a guy like Bass can only resist temptation for so long and his teammates keep offering up sucker bets Get a terrible tattoo for ten thousand bucks Sure Get another piercing for a weekend with a Bugatti Why not Marry the team s anthem singer on a wild weekend in Vegas Whoops Now if he doesn t want management finding out his marriage is just an alcohol induced bet gone wrong he ll have to convince his new wife to stick it out for a while and make it look legit Here s hoping Lady Luck is on his side She s an impetuous beauty a gifted singer songwriter and The Siege s lucky charm Emma Chastain is ready to do whatever it takes to make it big in the music industry That s why she jumped at the chance to become the Atlanta Siege s dedicated anthem singer With the team s stellar P R boosting her views and followers she s on the way to making all her dreams come true So when she s asked to travel with the team to Vegas she goes all in Sing for a packed arena of rabid hockey fans Sure Party with a bunch of sexy as sin hockey players Hell yeah Strike a bargain with the charming scoundrel she married on a dare and lie to the entire world Whoops It starts as a phony romance meant to save their careers How it all ends will depend on whether they re willing to up the stakes and risk losing their hearts Game on Chemical and Cellular Architecture Abel Lajtha,2013-04-18 After the completion of the first edition of this series this editor thought that a new edition would not be warranted in less than IS perhaps 20 years but it seems that we live in a time in which rapid changes are the norm and findings in a field such as neurochemistry develop exponentially The task of a future editor attempting to get a comprehensive neurochemical handbook for the year 2000 would be even less enviable but by then information processing may be very different The approach the design and the areas covered by each volume and each chapter are necessarily arbitrary and it is likely that other editors or authors would have approached the coverage or the organization in a different manner It is hoped however that readers will find the series helpful for beginning or for continuing work There may be some overlap among the various chapters but insisting on single coverage of an area would at times have restricted treatment to only one point of view and might have truncated and hurt the logical flow of some of the chapters

Morell, 2013-11-21 The division of the mature mammalian brain and spinal cord into regions of white matter and gray matter is observable upon the most cursory inspection Microscopic examination indicates that the white matter regions are characterized by a multilamellar sheath myelin which surrounds the axons A morphologically similar myelin imparts the white color to tracts of the peripheral nervous system although as is emphasized throughout the book there are very significant morphological and chemical differences between central and peripheral myelin The rapid postnatal accumulation of myelin is temporally associated with increasing functional capacity and presumably indicates some important role related to neuronal activity The ability of myelinated axons to conduct electrical impulses much more rapidly and with much lower use of energy relative to unmyelinated axons is now generally accepted As is evident from the above capsule description a considerable body of information concerning myelin is available However as in other areas of research the unknown expands before us more rapidly than we are able to add to our core of knowledge This is a corollary of the axiom that a good experiment raises more questions than it answers Among the areas currently under investigation in many laboratories are the
