#### THE UGLY QUESTION: WHY ARE RHINOS ENDANGERED?

- Rhinoceros are a critically endangered species: less than 30,000 rhino living in the wild today. At the start of the 20th century, there were over 500,000. Human activity has caused this dramatic decline in rhino numbers. Initially, numbers dropped due to hunting, but today the main threats to rhino are poaching and habitat loss.
- Poaching and illegal trade of rhino horn has increased sharply since 2007 and remains a major reason rhino are still endangered today. Poaching is big business, and organised criminal gangs are now well-equipped to track rhino. One rhino horn can fetch in excess of £200,000. Political and economic instability can increase the threat of poaching too.
- Rhino horn trade has been listed as a Convention on International Trade in Endangered Species (CITES) since 1977, yet the market demand for rhino horn is high. Rhino horns are used in traditional Asian medicine, particularly in Vietnam and China, though there is still a false belief that keratin found in the horn is beneficial as a remedy. More recently, and particularly among the middle and upper classes of Vietnam, the purchase of rhino horn has become someone's wealth and success. It is used as a status symbol and as an aphrodisiac.
- Habitat loss is another major threat to rhino populations. As more and more land is cleared for agriculture there is less available space for rhino to thrive in. Rhino need a large area in which to feed and roam. If rhino populations end up fragmented, with no "corridors" to travel between, chances of successful breeding and recovery will further decline.
- There are five rhinos surviving today – Black, White, Greater One-Horned (or Indian), Javan and Sumatran, and several sub-species within these groups.
- There are three species of rhino in Asia, two of which are "critically endangered," the Javan and Sumatran rhino. There are only around 72 Javan rhino left in the world and less than 100 Sumatran rhino. The Javan rhino is one of the rarest large mammals on earth, and was declared extinct in Vietnam in 2010. The Sumatran rhino population increased in numbers up to 3,550 from only 200 in 1980. The third Asian species is listed
