Total displacement = 10 miles (from a reference point – home)
Total distance = 30 miles (10 mi to work, 10 mi to home, 10 mi to work)
5. When does an object experience acceleration?
An object only experiences acceleration when it changes speed, changes its direction, or changes both speed and direction.
6. If a car travels around a circular track at 22 km/h, is the car's motion described as uniform or accelerated? Explain!
Its motion is described as accelerated since it is always changing direction even if it maintains a constant speed of 22 km/h.
7. If an object is said to have uniform motion, then what does one know about its velocity? about its acceleration?
An object with uniform motion has a constant velocity. It has no acceleration since constant velocity means the object's speed and direction remain the same.
