The Grasshopper: External and Internal Anatomy

Introduction:

Grasshopper morphology is relatively unspecialized as they are not greatly differentiated from the appearance of many insect groups. In fact, entomologists have found it useful to fully understand grasshopper morphology before studying groups that are more highly modified. The Eastern lubber grasshopper, *Roeckleya gartiana* is a large, slow-moving locust-like insect that has reduced wings and can barely fly. They are found in the southeastern U.S. and their exceptional size and ease of capture make them favorites for dissection.

Because of their relatively small size and difficult to distinguish internal anatomy, we will be focusing on the external anatomy of the grasshopper for this dissection. In order to complete the dissection, you will need to refer to the labeled diagram below and any other diagrams you can locate in the text materials provided. Also, be sure to answer the questions found throughout this lab.

The numbered structures are referred to in **bold-faced type** in the descriptions below.

1. head
2. thorax
3. abdomen
4. antenna
5. mouthparts
6. compound eye
7. hindwing
8. tympanum
9. forewing
10. jumping leg

11. wingpouch
12. spiracle
13. segment
14. walking leg
15. ovum
16. tracheaster
17. furrow
18. tibia
19. tarsus
20. maxilla
21. mandible
