Mathematical Methods and Models in Economic Planning, Management and Budgeting Galimkair

Mutanov, 2014-11-04 This book describes a system of mathematical models and methods that can be used to analyze real economic and managerial decisions and to improve their effectiveness. Application areas include management of development and operation budgets, assessment and management of economic systems using an energy entropy approach, equation of exchange rates and forecasting foreign exchange operations, evaluation of innovative projects, monitoring of governmental programs, risk management of investment processes, decisions on the allocation of resources and identification of competitive industrial clusters. The proposed methods and models were tested on the example of Kazakhstan's economy, but the generated solutions will be useful for applications at other levels and in other countries. Regarding your book *Mathematical Methods and Models in Economics*, I am impressed because now it is time when econometrics is becoming more appreciated by economists and by schools that are the hosts or employers of modern economists. Your presented results really impressed me. John F. Nash Jr., Princeton University, Nobel Memorial Prize in Economic Sciences. The book is within my scope of interest because of its novelty and practicality. First, there is a need for realistic modeling of complex systems, both natural and artificial, that conclude computer and economic systems. There has been an ongoing effort in developing models dealing with complexity and incomplete knowledge. Consequently, it is clear to recognize the contribution of Mutanov to encapsulate economic modeling with emphasis on budgeting and innovation. Secondly, the method proposed by Mutanov has been verified by applying to the case of the Republic of Kazakhstan with her vibrant emerging economy. Thirdly, Chapter 5 of the book is of particular interest for the computer technology community because it deals with innovation. In summary, the book of Mutanov should become one of the outstanding recognized pragmatic guides for dealing with innovative systems. Andrzej Rucinski, University of New Hampshire. This book is unique in its theoretical findings and practical applicability. The book is an illuminating study based on an applied mathematical model which uses methods such as linear programming and input output analysis. Moreover, this work demonstrates the author's great insight and academic brilliance in the fields of finance, technological innovations, and marketing vis-à-vis the market economy. From both theoretical and practical standpoint, this work is indeed a great achievement. Yeon Cheon Oh, President of Seoul National University.

Issues in Logic, Operations, and Computational Mathematics and Geometry: 2012 Edition, 2013-01-10 *Issues in Logic Operations and Computational Mathematics and Geometry 2012 Edition* is a ScholarlyEditions eBook that delivers timely authoritative and comprehensive information about Computational Mathematics. The editors have built *Issues in Logic Operations and Computational Mathematics and Geometry 2012 Edition* on the vast information databases of ScholarlyNews. You can expect the information about Computational Mathematics in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of *Issues in Logic Operations and Computational Mathematics and*

Geometry 2012 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions and companies. All of the content is from peer-reviewed sources and all of it is written, assembled and edited by the editors at ScholarlyEditions and available exclusively from us. Maple in Mathematics Education and Research Robert M. Corless, Jürgen Gerhard, Ilias S. Kotsireas, 2021-07-19 This book constitutes refereed proceedings of the 4th Maple Conference MC 2020 held in Waterloo, Ontario, Canada in November 2020. The 25 revised full papers and 3 short papers were carefully reviewed and selected out of 75 submissions; one invited paper is also presented in the volume. The papers included in this book cover topics in education, algorithms and applications of the mathematical software Maple.

Algebraic and Geometric Methods in Discrete Mathematics Heather A. Harrington, Mohamed Omar, Matthew Wright, 2017-03-16 This volume contains the proceedings of the AMS Special Session on Algebraic and Geometric Methods in Applied Discrete Mathematics held on January 11, 2015 in San Antonio, Texas. The papers present connections between techniques from pure mathematics and various applications amenable to the analysis of discrete models encompassing applications of combinatorics, topology, algebra, geometry, optimization and representation theory. Papers not only present novel results but also survey the current state of knowledge of important topics in applied discrete mathematics. Particular highlights include a new computational framework based on geometric combinatorics for structure prediction from RNA sequences, a new method for approximating the optimal solution of a sum of squares problem, a survey of recent Helly-type geometric theorems, applications of representation theory to voting theory and game theory, a study of fixed points of tensors and exponential random graph models from the perspective of algebraic statistics with applications to networks. This volume was written for those trained in areas such as algebra, topology, geometry and combinatorics who are interested in tackling problems in fields such as biology, the social sciences, data analysis and optimization. It may be useful not only for experts but also for students who wish to gain an applied or interdisciplinary perspective. **Artificial Intelligence and Symbolic**

Geosciences, Environment, and Resources, Commission on Physical Sciences, Mathematics, and Applications, Board on Atmospheric Sciences and Climate, Space Studies Board, Committee on Solar-Terrestrial Research, Committee on Solar and Space Physics, 2000-02-25 A major objective of the International Space Station is learning how to cope with the inherent risks of human spaceflight how to live and work in space for extended periods The construction of the station itself provides the first opportunity for doing so Prominent among the challenges associated with ISS construction is the large amount of time that astronauts will be spending doing extravehicular activity EVA or space walks EVAs from the space shuttle have been extraordinarily successful most notably the on orbit repair of the Hubble Space Telescope But the number of hours of EVA for ISS construction exceeds that of the Hubble repair mission by orders of magnitude Furthermore the ISS orbit has nearly twice the inclination to Earth's equator as Hubble's orbit so it spends part of every 90 minute circumnavigation at high latitudes where Earth's magnetic field is less effective at shielding impinging radiation This means that astronauts sweeping through these regions will be considerably more vulnerable to dangerous doses of energetic particles from a sudden solar eruption Radiation and the International Space Station estimates that the likelihood of having a potentially dangerous solar event during an EVA is indeed very high This report recommends steps that can be taken immediately and over the next several years to provide adequate warning so that the astronauts can be directed to take protective cover inside the ISS or shuttle The near term actions include programmatic and operational ways to take advantage of the multiagency assets that currently monitor and forecast space weather and ways to improve the in situ measurements and the predictive power of current models *Mathematical Modelling of Weld Phenomena: No. 4* H. Method for the Calculation of Spacecraft Umbra and Penumbra Shadow Terminator Points Carlos R. Ortiz Longo, 1995 A method for calculating orbital shadow terminator points is presented The current method employs the use of an iterative process which is used for an accurate determination of shadow points This calculation methodology is required since orbital perturbation effects can introduce large errors when a spacecraft orbits a planet in a high altitude and or highly elliptical orbit To compensate for the required iteration methodology all reference frame change definitions and calculations are performed with quaternions Quaternion algebra significantly reduces the computational time required for the accurate determination of shadow terminator points **Decision Making And Programming** Vyacheslav V

Kolbin, 2003-06-13 The problem of selection of alternatives or the problem of decision making in the modern world has

become the most important class of problems constantly faced by business people researchers doctors and engineers The fields that are almost entirely focused on conflicts where applied mathematics is successfully used are law military science many branches of economics sociology political science and psychology There are good grounds to believe that medicine and some branches of biology and ethics can also be included in this list Modern applied mathematics can produce solutions to many tens of classes of conflicts differing by the composition and structure of the participants specific features of the set of their objectives or interests and various characteristics of the set of their actions strategies behaviors controls and decisions as applied to various principles of selection or notions of decision optimization The current issues of social and economic systems involve the necessity to coordinate and jointly optimize various lines of development and activities of modern society For this reason the decision problems arising in investigation of such systems are versatile which shows up not only in the multiplicity of participants their interests and complexity of reciprocal effects but also in the laborious development of social utility criteria for a variety of indices and versatile objectives The efficient decision methods for such complex systems can be developed only the basis of specially developed mathematical tools
