Dardik challenges the rationality of accepting a priori that the universe is made of discrete particles. Instead, by drawing from his own discovery of a unique wave behavior and combining it with scientific facts, he shows that every single thing in existence, from quantum particles to entire galaxies, is waves waving in the unique pattern he calls SuperWaves. The discovery of SuperWaves and the ideas behind it, while profound, can be intuitively grasped by every reader, whether scientist or layperson. Touching on everything from quantum physics to gravity to emergent complexity and thermodynamics to the origins of health and disease, it shows that our health and the health of the environment and civilization depend upon our understanding of SuperWaves. The Nature of Nature is an absorbing account that combines Dardik's contrarian look at the history of science with philosophical discussion, his own groundbreaking research, and hope for the future. The initiative received the patronage of UNESCO World Water Association Programme (WWAP) and of the International Water Association (IWA) and was organized with the support of Springer MENA Publishing Program, Arab Water Council (AWC), Korean Society of Environmental Engineering (KSEE), and Italian Society of Sanitary Environmental Engineering Professors (GITISA). With the support of international experts invited as plenary and keynote speakers, the conference aimed to give a platform for Euro-Mediterranean countries to share and discuss key topics on such water-energy issues through the presentation of nature-based solutions, advanced technologies, and best practices for a more sustainable environment. This volume gives a general and brief overview on current research focusing on emerging Water-Energy-Nexus issues and challenges and its potential applications to a variety of environmental problems that are impacting the Euro-Mediterranean zone and surrounding regions. A selection of novel and alternative solutions applied worldwide are included. The volume contains over about one hundred carefully refereed contributions from 44 countries worldwide selected for the conference. Topics covered include: 1. Nexus framework and governance; 2. Environmental solutions for the sustainable development of the water sector; 3. Future clean energy technologies and systems under water constraints; 4. Environmental engineering and management; 5. Implementation and best practices. Intended for researchers in environmental engineering, environmental science, chemistry, and civil engineering.
