Smart Wireless Acoustic Sensor Network Design for Noise Monitoring in Smart Cities Rosa Ma Alsina-Pagès, Patrizia Bellucci, Giovanni Zambon, 2021-01-15 The Environmental Noise Directive END requires that a five year updating of noise maps is carried out to check and report on the changes that have occurred during the reference period The updating process is usually achieved using a standardized approach consisting of collecting and processing information through acoustic models to produce the updated noise maps This procedure is time consuming and costly and has a significant impact on the financial statement of the authorities responsible for providing the maps Furthermore the END requires that easy to read noise maps are made available to the public to provide information on noise levels and the subsequent actions to be undertaken by local and central authorities to reduce noise impacts In order to update the noise maps more easily and in a more effective way it is convenient to design an integrated system incorporating real time noise measurement and signal processing to identify and analyze the noise sources present in the mapping area e g road traffic noise leisure noise etc as well as to automatically generate and present the corresponding noise maps This wireless acoustic sensor network design

requires transversal knowledge from accurate hardware design for acoustic sensors to network structure design and management of the information with signal processing to identify the origin of the measured noise and graphical user interface application design to present the results to end users This book is collection in which several views of methodology and technologies required for the development of an efficient wireless acoustic sensor network from the first stages of its design to the tests conducted during deployment its final performance and possible subsequent implications for authorities in terms of the definition of policies Contributions include several LIFE and H2020 projects aimed at the design and implementation of intelligent acoustic sensor networks with a focus on the publication of good practices for the design and deployment of intelligent networks in other locations

**Street Smart** Samuel I Schwartz,2015-08-18 On a Saturday morning in December 1973 a section of New York s West Side Highway collapsed under the weight of a truck full of asphalt The road was closed seemingly for good

and the 80 000 cars that traveled it each day had to find a new way to their destinations It ought to have produced traffic chaos but it didn't The cars simply vanished It was a moment of revelation the highway had induced the demand for car travel It was a classic case of build it and they will come but for the first time the opposite had been shown to be true knock it down and they will go away Samuel I Schwartz was inspired by the lesson He started to reimagine cities most of all his beloved New York freed from their obligation to cars Eventually he found he was not alone Since the turn of the twenty first century a surreptitious revolution has taken place every year Americans are driving fewer miles And the generation named for this new century the Millennials are driving least of all Not because they can't afford to they don't want to They have better ideas for how to use their streets An urban transformation is underway and smart streets are at the heart of it They will boost property prices and personal fitness roll back years of congestion and smog and offer a transformative experience of American urban life From San Francisco to Salt Lake Charleston to Houston the American city is becoming a better and better place to be Schwartz's *Street Smart* is a dazzling and affectionate history of the struggle for control of American cities and an inspiring off road map to a more vibrant active and vigorous urban future *Waiting for Robots* Antonio A.

Casilli,2025-01-08 An essential investigation that pulls back the curtain on automation like AI to show human workers hidden labor Artificial Intelligence fuels both enthusiasm and panic Technologists are inclined to give their creations leeway pretend they're animated beings and consider them efficient As users we may complain when these technologies don't obey or worry about their influence on our choices and our livelihoods And yet we also yearn for their convenience see ourselves reflected in them and treat them as something entirely new But when we overestimate the automation of these tools award winning author Antonio A Casilli argues we fail to recognize how our fellow humans are essential to their efficiency The danger is not that robots will take our jobs but that humans will have to do theirs In this bracing and powerful book Casilli uses up to the minute research to show how today's technologies including AI continue to exploit human labor even ours He connects the diverse activities of today's tech laborers platform workers like Uber drivers and Airbnb hosts micro workers including those performing atomized tasks like data entry on Amazon Mechanical Turk and the rest of us as we evaluate text or images to show we're not robots react to Facebook posts or approve or improve the output of generative AI As Casilli shows us algorithms search engines and voice assistants wouldn't function without unpaid or underpaid human contributions Further he warns that if we fail to recognize this human work we risk a dark future for all human labor *Waiting for Robots* urges us to move beyond the simplistic notion that machines are intelligent and autonomous As the proverbial Godot robots are the bearers of a messianic promise that is always postponed Instead of bringing prosperity for all they discipline the workforce so we don't dream of a world without drudgery and exploitation Casilli's eye opening book makes clear that most automation requires human labor and likely always will shedding new light on today's consequences and tomorrow's threats of failing to recognize and compensate the click workers of today *Photography After Capitalism* Ben Burbridge,2020-12-15 A

polemical analysis of the politics and economics of today's vernacular photographic cultures In *Photography After Capitalism* Benedict Burbridge makes the case for a radically expanded conception of photography encompassing the types of labor too often obscured by black boxed technologies slick platform interfaces and the compulsion to display lives to others His lively and polemical analysis of today's vernacular photographic cultures shines new light on the hidden work of smartphone assembly teams digital content moderators Street View car drivers Google Scan Ops low paid gallery interns homeless participant photographers and the photo sharing masses Bringing together cultural criticism social history and political philosophy Burbridge examines how representations of our photographic lives in advertising journalism scholarship and particularly contemporary art shape a sense of what photography is and the social relations that comprise it More precisely he focuses on how different critical and creative strategies from the appropriation of social media imagery to performative traversals of the network from documentaries about secretive manual labor to science fiction fantasies of future sabotage affect our understanding of photography's interactions with political and economic systems Drawing insight and inspiration from recent analyses of digital labour community economies and post capitalism Burbridge harnesses the ubiquity of photography to cognitively map contemporary capitalism in search of its weak spots and levers sites of resistance and opportunities to build better worlds

**Geomedia** Scott McQuire, 2017-05-23 Geomedia offers critical analysis of the new possibilities and power relations emerging in the public space of contemporary cities As ubiquitous digital networks enable embedded and mobile devices to integrate place specific data with real time feedback circuits everyday experience of public space has become subject to new demands Looking beyond debates framed by the dominance of surveillance and spectacle McQuire asks how might the kind of collaborative practices that have flourished in art and online cultures be translated into urban space In the urban crisis of the 1960s Henri Lefebvre argued that the capacity for a city's inhabitants to actively appropriate the time and space of their surroundings was a critical dimension of modern democracy What does it mean to speak of the right to the city in the context of the networked city Addressing this question through a series of case studies this cutting edge text highlights the tensions between citizen and consumer communication and surveillance participation and control which define contemporary struggles over public space
