Beyond PD-1: novel checkpoint receptors and ligands as targets for immunotherapy Jesse Haramati,Dallas Flies,Fabiola Solorzano Ibarra,2025-02-24 The incredible power of the immune system to control or eliminate neoplasias has been made evident by the success of immune checkpoint inhibitors ICI While inhibitory checkpoint receptors are critical for the maintenance of hemostasis under physiological conditions dysregulation in the tumor microenvironment perturbs the role of these molecules with the promotion of exhausted cytotoxic cells that is cytotoxic cells that no longer are able to control tumors ICI leverages these targets to redirect cytotoxic responses and neutralize the suppressive tumor microenvironment However not all tumor types or patients respond to these therapies Great interest continues to be focussed on first generation ICI therapy PD 1 PD L1 and CTLA 4 but the potential for other targets and ligands remains vast

combination with other therapies such as chemotherapy or radiation Monoclonal antibodies work by binding to cancer cells and blocking their ability to grow and divide or by marking them for destruction by the immune system For example trastuzumab Herceptin is a monoclonal antibody that targets HER2 positive breast cancer cells and can be used in combination with chemotherapy to improve survival rates

Regulation of Cancer Immune Checkpoints Jie Xu, 2020-03-17 This book systematically reviews the most important findings on cancer immune checkpoints sharing essential insights into this rapidly evolving yet largely unexplored research topic The past decade has seen major advances in cancer immune checkpoint therapy which has demonstrated impressive clinical benefits The family of checkpoints for mediating cancer immune evasion now includes CTLA 4 PD 1 PD L1 CD27 CD70 FGL 1 LAG 3 Siglec 15 VISTA PD 1L VSIG3 CD47 SIRPA APOE LILRB4 TIGIT and many others Despite these strides most patients do not show lasting remission and some cancers have been completely resistant to the therapy The potentially lethal adverse effects of checkpoint blockade represent another major challenge the mechanisms of which remain poorly understood Compared to the cancer signaling pathways such as p53 and Ras mechanistic studies on immune checkpoint pathways are still in their infancy To improve the responses to checkpoint blockade therapy and limit the adverse effects it is essential to understand the molecular regulation of checkpoint molecules in both malignant and healthy cells tissues This

book begins with an introduction to immune checkpoint therapy and its challenges and subsequently describes the regulation of checkpoints at different levels In closing it discusses recent therapeutic developments based on mechanistic findings and outlines goals for future translational studies The book offers a valuable resource for researchers in the cancer immunotherapy field helping to form a roadmap for checkpoint regulation and develop safer and more effective immunotherapies
