Frontiers in the Acquisition of Literacy Claire M. Fletcher-Flinn, 2015-09-28 Learning to read and to spell are two of the most important cultural skills that must be acquired by children and for that matter anyone learning a second language We are not born with an innate ability to read A reading system of mental representations that enables us to read must be formed in the brain Learning to read in alphabetic orthographies is the acquisition of such a system which links mental representations of visual symbols letters in print words with pre existing phonological sound and semantic comprehension cognitive systems for language Although spelling draws on the same representational knowledge base and is usually correlated with reading the acquisition processes involved are not quite the same Spelling requires the sequential production of letters in words and at beginning levels there may not be a full degree of integration of phonology with its representation by the orthography Reading on the other hand requires only the recognition of a word for pronunciation Hence spelling is more difficult than reading and learning to spell may necessitate more complete representations or more conscious access to them The learning processes that children use to acquire such cognitive systems in the brain and whether these same processes are universal across different languages and orthographies are central theoretical questions Most children learn to read and spell their language at the same time thus the co ordination of these two facets of literacy acquisition needs explication as well as the effect of different teaching approaches on acquisition Lack of progress in either reading and or spelling is also a major issue of concern for parents and teachers necessitating a cross disciplinary approach to the problem encompassing major efforts from researchers in neuroscience cognitive science experimental psychology and education The purpose of this Research Topic is to summarize and review what has been accomplished so far and to further explore these general issues Contributions from different perspectives are welcomed and could include theoretical computational and empirical works that focus on the acquisition of literacy including cross orthographic research

A New Path Shaojun Zeng, 2023-08-21 In September 2020 China announced that it would peak carbon dioxide emissions by 2030 and become carbon neutral by 2060 How and whether it can achieve the target is a matter of great concern to the international community This is the first book to provide a comprehensive analysis of the underlying theory of Low Carbon Plus in which low carbon is the core and plus represents the critical areas that will go through low carbon transformation including industry agriculture buildings transportation energy and consumption and puts forward the most practical path for China to achieve carbon neutrality Starting from the basic theory of the Low Carbon Plus strategy the book introduces the low carbon development situation domestically and abroad summarizes the essential experiences and inspirations and outlines a roadmap for China to implement the strategy While focusing on emission reduction in primary and secondary industries this book strongly recommends the development of low carbon finance and low carbon consumption which can facilitate the ultimate realization of the Low Carbon Plus strategy As a fruitful result of the research by China s national think tank Low

Carbon Plus is an emerging development model that complements economic development and forces technological innovation institutional innovation and mind shift and it is expected to have a significant and far reaching impact on global economic growth

Multicultural Education in Glocal Perspectives Yun-Kyung Cha, Jagdish Gundara, Seung-Hwan Ham, Moosung Lee, 2016-11-15 This conceptually rich and empirically grounded book draws upon expertise from a panel of emerging and established international scholars to explore the institutionalization and effect of multicultural education on a global scale Previous studies of multicultural education have largely ignored the significance of understanding the combination of multiple sociopolitical influences on multicultural education in both policy and practice Filling this void this book sheds light on the two main reasons for taking a glocal perspective on multicultural education First children should be provided with meaningful learning opportunities to acquire the knowledge skills and attitudes necessary to live in a culturally and ethno linguistically diverse society where the distinction between the local and the global is becoming blurred Second understanding both the global grammar and the local semantics of multicultural education helps researchers and policy makers grasp the whole picture of multicultural education as an evolving social construct and phenomenon This new book provokes a new round of discussion and research to expand and enrich our inquiry into cultural diversity and educational inclusion
