

Food preservation

Men have preserved their foods from ancient times in order to keep the results of harvesting for winter months, for resale, for storage, and for transporting from sea to inland, overseas, or cross-country. To do so, they generally used nature's methods, which are drying, parching and fermenting. Parching is the most natural method, but for many thousands of years, others have also been used. Direct fermentation of liquids, usually by the introduction of yeast, has not only preserved liquids but also enhanced their quality, the same of course applying to salting. Smoking has preserved, and sometimes improved both fish and meat. Hickory wood is generally used for the fires, and natural juices are contained by a slight coating of wood creosote.

It was not until recently that the causes of rottenness were understood, these being the reactions of bacteria, moulds, yeasts and micro-organisms. Some fermentation and moulds are, of course, necessary in the production of food and drink; moulds, for example, being used in cheese-making. But the real 'breakthrough' in preservation against the causes of rottenness came, when it was learnt how to deal with the micro-organisms present in all foods and drinks, and which react chemically over a period to produce unpalatable or poisonous food or drink. There are three basic methods.

Firstly, food may be preserved by cooling or freezing, to a very low temperature when long-term preservation is required. This was originally done by packing in a mixture of salt and ice; today, cold storage is big business and refrigeration is a highly-developed science. 'Dehydration' may be bracketed with this method, as the principle involved is the same, namely to suspend the operation of bacteria which requires normal temperatures for chemical reaction. This is why reconstituted eggs cannot against dehydrated, and melted ice-cream refrozen. the second method of destruction is by heat-processes, which destroy all the bacteria present in food and drink. This process is used before canning foods in hermetically-sealed containers, great care being taken not to allow the foods or drink s to become re-infested after cooling and before canning. the third method is to preserve by the addition of chemicals, which control or destroy bacteria. this is merely a follow-up of the old systems of salting, smoking and candling.

Eventually, the method of 'cold sterilization' is expected to supersede most of the others; this amounts to exposing the food-stuffs to ionizing radiation.

Informative Writing, Teacher Guide, Grades 9-12 PCG Education, 2016-06-02 Informative Writing Paths to College and Career Jossey Bass and Public Consulting Group Inc PCG are proud to bring the Paths to College and Career English Language Arts ELA curriculum and professional development resources for grades 6-12 to educators across the country. Originally developed for EngageNY and written with a focus on the shifts in instructional practice and student experiences, the standards require Paths to College and Career includes daily lesson plans, guiding questions, recommended texts, scaffolding strategies, and other classroom resources. The Paths Writing Units: Argument Writing, Informative Writing, and Narrative Writing complement the full instructional program and can also be used independently, providing in-depth writing instruction to support all students in grades 9-12 in meeting grade-level standards. To emphasize the relationship between reading and writing, each Writing Unit includes accessible model texts that exemplify key elements of each text type and source texts that provide a topic for the unit writing assignment. Individual lessons guide students through the writing process, providing instruction on grammar and conventions and highlighting collaboration and reflection as key elements of effective writing. Students' final essays are assessed using a checklist developed by the class over the course of the unit. The organization and distinctive content of the model and source texts in each unit afford teachers the flexibility to implement each unit independently of the others and at any point during the curriculum. For example, a unit may be implemented to assess students' writing prior to implementation of the standard curriculum to scaffold writing instruction leading into a writing assessment or to support struggling writers by addressing gaps in skills as demonstrated in previous assessments. The Paths Writing Units provide teachers with invaluable opportunities to engage students as active participants in their own learning at every stage of the writing process and to customize instruction to meet the varying needs of all students.

Lloyd's Register Technical Association Session

1979-1980 Lloyd's Register Foundation, 1979-01-01 The Lloyd's Register Technical Association LRTA was established in 1920 with the primary objective of sharing technical expertise and knowledge within Lloyd's Register. Publications have consistently been released on a yearly basis with a brief interruption between 1938 and 1946. These publications serve as a key reference point for best practices and were initially reserved for internal use to maximise LR's competitive advantage. Today the LRTA takes a fresh approach focusing on collaboration by combining professional expertise from across LRF Group to ensure a frequent output of fresh perspectives and relevant content. The LRTA has evolved into a Group-wide initiative that identifies, captures and shares knowledge spanning various business streams and functions. To support this modern approach, the LRTA has adopted a new structure featuring representatives and senior governance across the business streams and the LR Foundation. The Lloyd's Register Technical Association Papers should be seen as historical documents representing earlier viewpoints and are not reflective of current thinking and perspectives by the current LR Technical Association. The Lloyd's Register Staff Association LRSA changed its name to the Lloyd's Register Technical Association LRTA in 1973.

Advances in Case-Based Reasoning Klaus-Dieter Althoff, Ralph Bergmann, Mirjam Minor, Alexandre Hanft, 2008-08-29 This volume contains the papers presented at the 9th European Conference on Case Based Reasoning ECCBR 2008. Case-based reasoning (CBR) is an artificial intelligence approach whereby new problems are solved by remembering, adapting and reusing solutions to a previously solved similar problem. The collection of previously solved problems and their associated solutions is stored in the case base. New or adapted solutions are learned and updated in the case base as needed. In remembrance of the First European Workshop on Case Based Reasoning which took place 15 years ago at the European Academy Otzenhausen not far from Trier, this year's conference was especially devoted to the past, present and future of case-based reasoning. ECCBR and the International Conference on Case Based Reasoning (ICCBR) alternate every year. ECCBR 2008 followed a series of seven successful European workshops previously held in Otzenhausen, Germany (1993), Chilly, France (1994), Lausanne, Switzerland (1996), Dublin, Ireland (1998) and Trento, Italy (2000) and three European conferences in Aberdeen, UK (2002), Madrid, Spain (2004) and Olu Deniz Fethiye, Turkey (2006). The International Conferences on Case Based Reasoning (ICCBR) were previously held in Sesimbra, Portugal (1995), Providence, Rhode Island, USA (1997), Seon, Germany (1999), Vancouver, Canada (2001), Trondheim, Norway (2003), Chicago, USA (2005) and Belfast, Northern Ireland (2007). These meetings have a history of attracting first-class European and international researchers and practitioners. The proceedings of the ECCBR and ICCBR conferences are published by Springer in their LNAI series.

Measurement and Probability Giovanni Battista Rossi, 2014-05-19 Measurement plays a fundamental role both in physical and behavioral sciences as well as in engineering and technology it is the link between abstract models and empirical reality and is a privileged method of gathering information from the real world Is it possible to develop a single theory of measurement for the various domains of science and technology in which measurement is involved This book takes the challenge by addressing the following main issues What is the meaning of measurement How do we measure What can be measured A theoretical framework that could truly be shared by scientists in different fields ranging from physics and engineering to psychology is developed The future in fact will require greater collaboration between science and technology and between different sciences Measurement which played a key role in the birth of modern science can act as an essential interdisciplinary tool and language for this new scenario A sound theoretical basis for addressing key problems in measurement is provided These include perceptual measurement the evaluation of uncertainty the evaluation of inter comparisons the analysis of risks in decision making and the characterization of dynamical measurement Currently increasing attention is paid to these issues due to their scientific technical economic and social impact The book proposes a unified probabilistic approach to them which may allow more rational and effective solutions to be reached Great care was taken to make the text as accessible as possible in several ways Firstly by giving preference to as interdisciplinary a terminology as possible secondly by carefully defining and discussing all key terms This ensures that a wide readership including people from different mathematical backgrounds and different understandings of measurement can all benefit from this work Concerning mathematics all the main results are preceded by intuitive discussions and illustrated by simple examples Moreover precise proofs are always included in order to enable the more demanding readers to make conscious and creative use of these ideas and also to develop new ones The book demonstrates that measurement which is commonly understood to be a merely experimental matter poses theoretical questions which are no less challenging than those arising in other apparently more theoretical disciplines
