

Solving Inequalities

Solving inequalities is similar to solving equations, but where an equation has one unique solution, an inequality has a range of solutions.

To solve an inequality we calculate the values that an unknown variable can be in that inequality.

 Example

$$\begin{aligned}2x + 1 &< 9 \\2x &< 8 \\x &< 4\end{aligned}$$

Multiplying or dividing by a negative number **changes the direction of the inequality**.

 Example

$$\begin{aligned}1 - 2x &< 9 \\-2x &< 8 \\x &> -4\end{aligned}$$

Gregory Lakey, 2019-08-07 Mathematics can be very boring Passing out mundane worksheets that do not bridge connections is a waste of time As mathematics educators we struggle to find projects or activities that engage students this is one that does I currently start this project on the first day of school every year Students have always enjoyed manipulating the cars ramps or photogates to gather the data needed The way this project integrates Algebra 1 Algebra 2 and Statistics has been great with regards to the connections made Where students have previously struggled with seeing how different content or subjects tie together they are able to do so throughout the duration of this curriculum Take your time with this project please read throughout it use the resources I provided and just enjoy it I have fun with this project every year and I know you will too P S A Car and Ramp set must be purchased for this curriculum to be effective Mr Gregory P Lakey

Equations and Inequalities Jiri Herman, Radan Kucera, Jaromir Simsa, 2000-03-23 A look at solving problems in three areas of classical elementary mathematics equations and systems of equations of various kinds algebraic inequalities and elementary number theory in particular divisibility and diophantine equations In each topic brief theoretical discussions

are followed by carefully worked out examples of increasing difficulty and by exercises which range from routine to rather more challenging problems While it emphasizes some methods that are not usually covered in beginning university courses the book nevertheless teaches techniques and skills which are useful beyond the specific topics covered here With approximately 330 examples and 760 exercises Developing Essential Understanding of Expressions, Equations, and Functions for Teaching Mathematics in Grades 6-8 Gwendolyn M. Lloyd, Beth A. Herbel-Eisenmann, Jon R. Star, 2011 Why do some equations have one solution others two or even more solutions and some no solutions Why do we sometimes need to switch the direction of an inequality symbol in solving an inequality What could you say if a student described a function as an equation How much do you know and how much do you need to know Helping your students develop a robust understanding of expressions equations and functions requires that you understand this mathematics deeply But what does that mean This book focuses on essential knowledge for teachers about expressions equations and functions It is organised around five big ideas supported by multiple smaller interconnected ideas essential understandings Taking you beyond a simple introduction to expressions equations and functions the book will broaden and deepen your mathematical understanding of one of the most challenging topics for students and teachers It will help you engage your students anticipate their perplexities avoid pitfalls and dispel misconceptions You will also learn to develop appropriate tasks techniques and tools for assessing students understanding of the topic Focus on the ideas that you need to understand thoroughly to teach confidently How Does Using a Model-centered Approach to Teaching Linear Equations Affect Students' Attitudes about Learning Mathematics? David Earl Pugh, 2013 This study addresses the effect that the use of interactive diagrams from GeoGebra and a focus on four representations has on students attitudes toward learning linear equations The key attitudes assessed are built on Schoenfeld's findings of mathematical attitudes commonly found in students and the Efficacy Institute's student survey built on the findings of Carol Dweck Mixed methods were used A pre and post unit survey identified key attitude changes and student interviews provided a depth of understanding as well as the student perspective of the attitude changes Participants in the study were students of the researcher at an alternative learning center in Minnesota Results indicate a positive student response in efficacy attitudes but with the object of the attitude change being the teacher rather than the technology Students demonstrated a deeper understanding of math as a system but still viewed assignments and assessments as a process of following steps to obtain the correct answer
