## Chapter 1

---

### Problem 1.1

A nucleus, originally at rest, decays radioactively by emitting an electron of momentum  $1.73 \text{ MeV}/c$ , and at right angles to the direction of the electron a neutrino with momentum  $1.00 \text{ MeV}/c$ . (The  $\text{MeV}$  (million electron volt) is a unit of energy, used in modern physics, equal to  $1.60 \times 10^{-6} \text{ erg}$ . Correspondingly,  $\text{MeV}/c$  is a unit of linear momentum equal to  $5.34 \times 10^{-17} \text{ gm-cm/sec.}$ ) In what direction does the nucleus recoil? What is its momentum in  $\text{MeV}/c$ ? If the mass of the residual nucleus is  $3.90 \times 10^{-27} \text{ gm}$ , what is its kinetic energy, in electron volts?

Place the nucleus at the origin, and suppose the electron is emitted in the positive  $y$  direction, and the neutrino in the positive  $x$  direction. Then the resultant of the electron and neutrino momenta has magnitude

$$|\mathbf{p}_{e+\nu}| = \sqrt{(1.73)^2 + 1^2} = 2 \text{ MeV}/c,$$

and its direction makes an angle

$$\theta = \tan^{-1} \frac{1.73}{1} = 60^\circ$$

with the  $x$  axis. The nucleus must acquire a momentum of equal magnitude and directed in the opposite direction. The kinetic energy of the nucleus is

$$T = \frac{p^2}{2m} = \frac{4 \text{ MeV}^2 c^{-2}}{2 \cdot 3.9 \cdot 10^{-27} \text{ gm}} \cdot \frac{1.78 \cdot 10^{-27} \text{ gm}}{1 \text{ MeV } c^{-2}} = 9.1 \text{ ev}$$

This is much smaller than the nucleus rest energy of several hundred  $\text{GeV}$ , so the non-relativistic approximation is justified.

Head Attitude Determination and Control Section National Aeronautics and Space Administration Goddard Space Flight  
Center Extensive work has been done for many years in the areas of attitude determination attitude prediction and attitude  
control During this time it has been difficult to obtain reference material that provided a comprehensive overview of attitude  
support activities This lack of reference material has made it difficult for those not intimately involved in attitude functions to  
become acquainted with the ideas and activities which are essential to understanding the various aspects of spacecraft  
attitude support As a result I felt the need for a document which could be used by a variety of persons to obtain an  
understanding of the work which has been done in support of spacecraft attitude objectives It is believed that this book  
prepared by the Computer Sciences Corporation under the able direction of Dr James Wertz provides this type of reference  
This book can serve as a reference for individuals involved in mission planning attitude determination and attitude dynamics  
an introductory textbook for students and professionals starting in this field an information source for experimenters or  
others involved in spacecraft related work who need information on spacecraft orientation and how it is determined but who  
have neither the time nor the resources to pursue the varied literature on this subject and a tool for encouraging those who  
could expand this discipline to do so because much remains to be done to satisfy future needs      *NASA Technical*

Clark, E.H. Dowell, 2004-09-30 In this new edition the fundamental material on classical linear aeroelasticity has been revised  
Also new material has been added describing recent results on the research frontiers dealing with nonlinear aeroelasticity as  
well as major advances in the modelling of unsteady aerodynamic flows using the methods of computational fluid dynamics  
and reduced order modeling techniques New chapters on aeroelasticity in turbomachinery and aeroelasticity and the latter  
chapters for a more advanced course a graduate seminar or as a reference source for an entrance to the research literature

*A Modern Course in Aeroelasticity* Howard C. Curtiss Jr., Robert H. Scanlan, Fernando Sisto, 2013-11-11 A reader who  
achieves a substantial command of the material contained in this book should be able to read with understanding most of the  
literature in the field Possible exceptions may be certain special aspects of the subject such as the aeroelasticity of plates and  
shells or the use of electronic feedback control to modify aeroelastic behavior The first author has considered the former  
topic in a separate volume The latter topic is also deserving of a separate volume In the first portion of the book the basic  
physical phenomena of divergence control surface effectiveness flutter and gust response of aeronautical vehicles are treated  
As an indication of the expanding scope of the field representative examples are also drawn from the non aeronautical  
literature To aid the student who is encountering these phenomena for the first time each is introduced in the context of a
