

$$b^2 - 4(ac)$$

### Understanding the Discriminant

Find the value of the discriminant of each quadratic equation.

1)  $6p^2 - 2p - 3 = 0$

$$4 - 4(-18)$$

$$4 + 72 = \boxed{76}$$

2)  $-2x^2 - x - 1 = 0$

$$1 - 4(2)$$

$$1 - 8 = \boxed{-7}$$

3)  $-4m^2 - 4m + 5 = 0$

$$16 - 4(-20)$$

$$16 + 80 = \boxed{96}$$

4)  $5b^2 + b - 2 = 0$

$$1 - 4(-10)$$

$$1 + 40 = \boxed{41}$$

5)  $r^2 + 5r + 2 = 0$

$$25 - 4(2)$$

$$25 - 8 = \boxed{17}$$

6)  $2p^2 + 5p - 4 = 0$

$$25 - 4(-8)$$

$$25 + 32 = \boxed{57}$$

Find the discriminant of each quadratic equation then state the number of real and imaginary solutions.

7)  $9n^2 - 3n - 8 = -10$

$$9n^2 - 3n + 12 = 0$$

$$b^2 - 4ac$$

$$9 - 4(12)$$

$$9 - 48 = -39$$

$$-39 < 0$$

$$b^2 - 4ac$$

$$9 - 48 = -39$$

$$-39 < 0$$

$$9n^2 - 3n + 12 = 0$$

$$b^2 - 4ac$$

$$9 - 4(12) = -39 < 0$$

8)  $-2x^2 - 8x - 14 = -6$

$$-2x^2 - 8x - 8 = 0$$

$$b^2 - 4ac$$

$$64 - 4(8)$$

$$64 - 32 = 32$$

$$32 > 0$$

$$-2x^2 - 8x - 8 = 0$$

$$b^2 - 4ac$$

$$64 - 4(8) = 32 > 0$$

$$32 > 0$$

$$-2x^2 - 8x - 8 = 0$$

$$b^2 - 4ac$$

$$64 - 4(8) = 32 > 0$$

Metrizable Barrelled Spaces J C Ferrando, M Lopez Pellicer, L M Sanchez Ruiz, 1995-09-28 This text draws together a number of recent results concerning barrelled locally convex spaces from general facts involving cardinality and dimensionality to barrelledness of some familiar vector valued or scalar valued normed spaces of functional analysis and providing a study of some of these spaces Throughout the exposition the authors show the strong relationship between barrelledness properties and vector valued measure theory

**Topics In Theoretical Physics - Proceedings Of The Second Pacific Winter For Theoretical Physics** Yongmin Cho, 1997-04-01 Recently exciting new notions have been emerging in theoretical physics The quantum nature of gravitation revealed in the physics of black holes exotic excitations obeying fractional statistics and integrable structure such as Yangian symmetry in low dimensional models are some of the subjects presented in this volume The spectrum of the talks at the School reflected in the proceedings is a wide one ranging from the phenomenology of particle physics to that of condensed matter physics to topics of a mathematical nature This is an indication that there is a robust interplay of ideas from diverse disciplines of theoretical physics in the Asia Pacific region

Newell, 1985-01-01 The soliton is a dramatic concept in nonlinear science What makes this book unique in the treatment of this subject is its focus on the properties that make the soliton physically ubiquitous and the soliton equation mathematically miraculous Here on the classical level is the entity field theorists have been postulating for years a local traveling wave pulse a lump like coherent structure the solution of a field equation with remarkable stability and particle like properties It is a fundamental mode of propagation in gravity driven surface and internal waves in atmospheric waves in ion acoustic and Langmuir waves in plasmas in some laser waves in nonlinear media and in many biologic contexts such as alpha helix proteins

Gabbay, Philippe Smets, 1998-10-31 We are happy to present the first volume of the Handbook of Defeasible Reasoning and Uncertainty Management Systems Uncertainty pervades the real world and must therefore be addressed by every system that attempts to represent reality The representation of uncertainty is a major concern of philosophers logicians artificial intelligence researchers and computer scientists psychologists statisticians economists and engineers The present Handbook volumes provide frontline coverage of this area This Handbook was produced in the style of previous handbook series like the Handbook of Philosophical Logic the Handbook of Logic in Computer Science the Handbook of Logic in Artificial Intelligence and Logic Programming and can be seen as a companion to them in covering the wide applications of logic and reasoning We hope it will answer the needs for

adequate representations of uncertainty This Handbook series grew out of the ESPRIT Basic Research Project DRUMS II where the acronym is made out of the Handbook series title This project was financially supported by the European Union and regroups 20 major European research teams working in the general domain of uncertainty As a fringe benefit of the DRUMS project the research community was able to create this Hand book series relying on the DRUMS participants as the core of the authors for the Handbook together with external international experts

**Algebras, Lattices, Varieties** Ralph N. McKenzie, George F. McNulty, Walter F. Taylor, 2018-07-09 This book presents the foundations of a general theory of algebras Often called universal algebra this theory provides a common framework for all algebraic systems including groups rings modules fields and lattices Each chapter is replete with useful illustrations and exercises that solidify the reader s understanding The book begins by developing the main concepts and working tools of algebras and lattices and continues with examples of classical algebraic systems like groups semigroups monoids and categories The essence of the book lies in Chapter 4 which provides not only basic concepts and results of general algebra but also the perspectives and intuitions shared by practitioners of the field The book finishes with a study of possible uniqueness of factorizations of an algebra into a direct product of directly indecomposable algebras There is enough material in this text for a two semester course sequence but a one semester course could also focus primarily on Chapter 4 with additional topics selected from throughout the text

Selected Papers and Other Writings Irving Kaplansky, 1995-04-13 It is not often that one gets to write a preface to a collection of one s own papers The most urgent task is to thank the people who made this book possible That means first of all Hy Bass who on behalf of Springer Verlag approached me about the idea The late Walter Kaufmann Biihler was very encouraging Paulo Ribenboim helped in an important way and Ina Lindemann saw the project through with tact and skill that

I deeply appreciate My wishes have been indulged in two ways First I was allowed to follow up each selected paper with an afterthought Back in my student days I became aware of the *Gesammelte Mathematische Werke* of Dedekind edited by Fricke Noether and Ore I was impressed by the editors notes that followed most of the papers and found them very useful A more direct model was furnished by the collected papers of Lars Ahlfors in which the author himself supplied afterthoughts for each paper or group of papers These were tough acts to follow but I hope that some readers will find at least some of my afterthoughts interesting Second I was permitted to add eight previously unpublished items My model here to a certain extent was the charming little book *A Mathematician's Miscellany* by J E Littlewood In picking these eight I had quite a selection to make from fourteen loose leaf notebooks of such writings Here again I hope that at least some will be found to be of interest

**Mathematical Masterpieces** Art Knoebel, Reinhard Laubenbacher, Jerry Lodder, David Pengelley, 2007-10-16 Intended for juniors and seniors majoring in mathematics as well as anyone pursuing independent study this book traces the historical development of four different mathematical concepts by presenting readers with the original sources Each chapter showcases a masterpiece of mathematical achievement anchored to a sequence of selected primary sources The authors examine the interplay between the discrete and continuous with a focus on sums of powers They then delineate the development of algorithms by Newton Simpson and Smale Next they explore our modern understanding of curvature and finally they look at the properties of prime numbers The book includes exercises numerous photographs and an annotated bibliography

*Algebras of Unbounded Operators* Aleksey Ber, Vladimir Chilin, Galina Levitina, Fedor Sukochev, Dmitriy Zanin, 2025-03-03 Derivations on von Neumann algebras are well understood and are always inner meaning that they act as commutators with a fixed element from the algebra itself The purpose of this book is to provide a complete description of derivations on algebras of operators affiliated with a von Neumann algebra The book is designed to serve as an introductory graduate level to various measurable operators affiliated with a von Neumann algebras and their properties These classes of operators form their respective algebras and the problem of describing derivations on these algebras was raised by Ayupov and later by Kadison and Liu A principal aim of the book is to fully resolve the Ayupov Kadison Liu problem by proving a necessary and sufficient condition of the existence of non inner derivation of algebras of measurable operators It turns out that only for a finite type I von Neumann algebra  $M$  may there exist a non inner derivation on the algebra of operators affiliated with  $M$  In particular it is established that the classical derivation  $d/dt$  of functions of real variables can be extended up to a derivation on the algebra of all measurable functions This resolves a long standing problem in classical analysis

Stochastic Transport in Complex Systems Andreas Schadschneider, Debashish Chowdhury, Katsuhiko Nishinari, 2010-10-01 The first part of the book provides a pedagogical introduction to the physics of complex systems driven far from equilibrium In this part we discuss the basic concepts and theoretical techniques which are commonly used to study classical stochastic transport in systems of interacting driven particles The analytical techniques include mean field theories matrix product ansatz renormalization group etc and the numerical methods are mostly based on computer simulations In the second part of the book these concepts and techniques are applied not only to vehicular traffic but also to transport and traffic like phenomena in living systems ranging from collective movements of social insects for example ants on trails to intracellular molecular motor transport These demonstrate the conceptual unity of the fundamental principles underlying the apparent diversity of the systems and the utility of the theoretical toolbox of non equilibrium statistical mechanics in interdisciplinary research far beyond the traditional disciplinary boundaries of physics Leading industry experts provide a broad overview of the interdisciplinary nature of physics Presents unified descriptions of intracellular ant and vehicular traffic from a physics point of view Applies theoretical methods in practical everyday situations Reference and guide for physicists engineers and graduate students

Hausdorff Gaps and Limits R. Frankiewicz, P. Zbierski, 1994-02-23 Gaps and limits are two phenomena occurring in the Boolean algebra  $\mathcal{P}(X)$  Both were discovered by F Hausdorff in the mid 1930 s This book aims to show how they can be used in solving several kinds of mathematical problems and to convince the reader that they are of interest in themselves The forcing technique which is not commonly known is used widely in the text A short explanation of the forcing method is given in Chapter 11 Exercises both easy and more difficult are given throughout the book

Topological Geometrophysics Matti Pitkanen, 2016-03-03 Topological geometrodynamics TGD is a modification of the theory of general relativity inspired by the problems related to the definition of inertial and gravitational energies in the earlier hypotheses TGD is also a generalization of super string models TGD brings forth an elegant theoretical projection of reality and builds upon the work by renowned scientists Wheeler Feynman Penrose Einstein Josephson to name a few In TGD Physical space time planes are visualized as four dimensional surfaces in a certain 8 dimensional space  $H$  The choice of  $H$  is fixed by symmetries of standard model and leads to a geometric mapping of known classical fields and elementary particle numbers TGD differs from Einstein's

geometrodynamics in the way space time planes or sheets are lumped together Extending the theory based on fusing number concepts implies a further generalisation of the space time concept allowing the identification of space time correlates of cognition and intentionality Additionally zero energy ontology forces an extension of quantum measurement theory to a theory of consciousness and a hierarchy of phases is identified Dark matter is thus predicted with far reaching implications for the understanding of consciousness and living systems Therefore it sets a solid foundation for modeling our universe in geometric terms Topological Geometrodynamics An Overview explains basic and advanced concepts about TGD The book covers introductory information and classical TGD concepts before delving into twistor space theory particle physics infinite dimensional spinor geometry generalized number theory Planck constants and the applications of TGD theory in research The book is a valuable guide to TDG theory for researchers and advanced graduates in theoretical physics and cosmology
