General Reactions to Investigations in Organic Chemistry Dr. Lassar-Cohn, 1904 A survey of the enormous number of
investigations which are constantly appearing in the domain of organic chemistry reveals the fact that although their
theoretical portions are based in the most severely logical fashion on the tetravalency of the carbon atom the technique of
the research is essentially empirical An intimate connection with organic investigation extending over many years has
convinced me of the availability of certain general principles in the practical part of the work they are partly theoretical
partly practical in their nature and their application to the praxis of organic research is capable of affording general help and
improvement in an enormously large number of cases In this book I have presented all the material bearing on the subject
which I have accumulated Page v *Immune Sera* August Wassermann, Charles Bolduan, 1904 **Topographic Surveying**
