Green Outcomes in the Real World Peter McManners, 2016-04-15 Over the last three decades the world economy has grown strongly on the back of globalization supported by the policies of free trade open markets and privatisation. Support has also grown for the concept of sustainability meeting the needs of the present without compromising the ability of future generations to meet their own needs. But as the Earth's systems come under increasing strain the inherent conflict between sustainability and globalization has been exposed. *Green Outcomes in a Real World* examines the shift in thinking required to reconcile these two important areas of policy. In this ground breaking book Peter McManners has coined the term Proximization to define a new policy framework. The principles of Proximization are sustainability subsidiarity primacy of the state and market economics and the application of these familiar concepts towards a sustainable globalised world is novel and different. The author argues that

adherence to the principles of proximization will return world society to a stable natural order and will mean changes Global commodity flows will reduce and barriers to migration will increase National governments will demand more control over their finances leading to restrictions on capital flows Indeed Peter believes that an element of selfish determination is needed The new world order will be sustainable by design Global organisations such as the UN national governments and global corporations will have to understand and apply a different paradigm The arguments in this book do not reflect the idealism or even naivety of some of the green movement This book is about hard edged reality presented by an author with huge experience and a deep understanding of the business perspective It will appeal to a wide range of professionals involved in setting policy and future direction for businesses governments and non governmental bodies as well as to those with an academic interest in business economics social and environmental issues and public policy Manias, Panics, and Crashes Robert Z. Aliber, Charles P. Kindleberger, Robert N. McCauley, 2023-03-06 In the Eighth Edition of this classic text on the financial history of bubbles and crashes Robert McCauley joins with Robert Aliber in building on Charles Kindleberger's renowned work McCauley draws on his central banking experience to introduce new chapters on cryptocurrency and the United States as the 21st Century global lender of last resort He also updates the book's coverage of the recent property bubble in China as well as providing new perspectives on the US housing bubble of 2003 2006 and the Japanese bubble of the late 1980s And he gives new attention to the social psychology that leads people to take the risk of investing in Ponzi schemes and asset price bubbles For the first time in this revised and updated edition figures highlight key points to ensure that today's generation of finance and economic researchers students practitioners and policy makers as well as investors looking to avoid crashes have access to this panoramic history of financial crisis *Estimating Impact* Alexander Kott, Gary Citrenbaum, 2010-09-15 Sociological theories of crime include theories of strain blame crime on personal stressors theories of social learning blame crime on its social rewards and see crime more as an institution in conflict with other institutions rather than as individual deviance and theories of control look at crime as natural and rewarding and explore the formation of institutions that control crime Theorists of corruption generally agree that corruption is an expression of the Patron Client relationship in which a person with access to resources trades resources with kin and members of the community in exchange for loyalty Some approaches to modeling crime and corruption do not involve an explicit simulation rule based systems Bayesian networks game theoretic approaches often based on rational choice theory and Neoclassical Econometrics a rational choice based approach Simulation based approaches take into account greater complexities of interacting parts of social phenomena These include fuzzy cognitive maps and fuzzy rule sets that may incorporate feedback and agent based simulation which can go a step farther by computing new social structures not previously identified in theory The latter include cognitive agent models in which agents learn how to perceive their environment and act upon the perceptions of their individual experiences and reactive agent simulation which while less capable than cognitive agent simulation is adequate for

testing a policy's effects with existing societal structures For example NNL is a cognitive agent model based on the REPAST Symphony toolkit
