

Lesson 3.1 -- Using and Interpreting Function Notation

Graphs:

- can provide an overview of the function
- can be used to find the domain and range of a function
- can be used to find the x and y intercepts of a function
- can be used to find the maximum and minimum of a function
- can be used to find the points of intersection of two functions

Interpreting a function written in function notation:

- $f(x)$ represents the output of the function when the input is x .
- $f(0)$ represents the output of the function when the input is 0.
- $f(10)$ represents the output of the function when the input is 10.
- $f(20)$ represents the output of the function when the input is 20.
- $f(30)$ represents the output of the function when the input is 30.
- $f(40)$ represents the output of the function when the input is 40.
- $f(50)$ represents the output of the function when the input is 50.
- $f(60)$ represents the output of the function when the input is 60.
- $f(70)$ represents the output of the function when the input is 70.
- $f(80)$ represents the output of the function when the input is 80.
- $f(90)$ represents the output of the function when the input is 90.
- $f(100)$ represents the output of the function when the input is 100.

Check Your Understanding
