Craig's Soil

Mechanics Jonathan Knappett, R.F. Craig, 2019-10-11 Craig's Soil Mechanics continues to evolve and remain the definitive text for civil engineering students worldwide. It covers fundamental soil mechanics and its application in applied geotechnical engineering from A to Z and at the right depth for an undergraduate civil engineer with sufficient extension material for supporting MSc level courses and with practical examples and digital tools to make it a useful reference work for practising engineers. This new edition now includes Restructured chapters on foundations and earthworks the latter including new material on working platforms and collapse of underground cavities sinkhole formation. New mobilised stress based deformation methods that can straightforwardly be used with both linear and non linear soil stiffness models and field measurements of shear wave velocity for serviceability limit state design. Extended sets of correlations for making sensible first estimates of soil parameters adding deformation based parameters for broader coverage than the Eighth Edition. Extended section on robust statistical selection of characteristic soil parameters. Greater use of consolidation theory throughout in determining whether actions processes and laboratory in situ tests are drained or undrained. Extended chapter on in situ testing adding the Flat Dilatometer Test DMT and interpretation of consolidation parameters from CPTU and DMT testing. An updated section on pile load testing. Additional worked examples and end of chapter problems covering new material with fully worked solutions for lecturers. The electronic resources on the book's companion website are developed further with the addition of two new spreadsheet numerical analysis tools and improvement of existing tools from the Eighth Edition. Using these readers can take real soil test data interpret its mechanical properties and apply these to a range of common geotechnical design problems at ultimate and serviceability limiting states. [SME Mineral Processing and Extractive Metallurgy Handbook](#) Courtney A. Young, 2019-02-01 This landmark publication distills the body of knowledge that characterizes mineral processing and extractive metallurgy as disciplinary fields. It will inspire and inform current and future generations of minerals and metallurgy professionals. Mineral processing and extractive metallurgy are atypical disciplines requiring a combination of knowledge experience and art. Investing in this trove of valuable information is a must for all those involved in the industry students engineers mill managers and operators. More than 192 internationally recognized experts have contributed to the handbook's 128 thought provoking chapters that examine nearly every aspect of mineral processing and extractive metallurgy. This inclusive reference addresses the magnitude of traditional industry topics and also addresses the new technologies and important cultural and social issues that are important today. Contents: Mineral Characterization and Analysis Management and Reporting Comminution Classification and Washing Transport and Storage Physical Separations Flotation Solid and Liquid Separation Disposal Hydrometallurgy Pyrometallurgy Processing of Selected Metals Minerals and Materials. *Managerial Decision Modeling* Nagraj (Raju) Balakrishnan, Barry Render, Ralph Stair, Charles Munson, 2017-08-07 This book fills a void for a balanced approach to spreadsheet based decision modeling. In addition to using spreadsheets as a tool to quickly set up and solve decision models the authors show how and why the methods work.

and combine the user's power to logically model and analyze diverse decision making scenarios with software based solutions. The book discusses the fundamental concepts, assumptions and limitations behind each decision modeling technique, shows how each decision model works and illustrates the real world usefulness of each technique with many applications from both profit and nonprofit organizations. The authors provide an introduction to managerial decision modeling, linear programming models, modeling applications and sensitivity analysis, transportation assignment and network models, integer goal and nonlinear programming models, project management decision theory, queuing models, simulation modeling, forecasting models and inventory control models. The additional material files Chapter 12 Excel files for each chapter, Excel modules for Windows, Excel modules for Mac. 4th edition errata can be found at <https://www.degruyter.com/view/product/486941>.
