Tribes and Territories in the 21st Century Paul Trowler, Murray Saunders, Veronica Bamber, 2012-01-25 The tribes and territories metaphor for the cultures of academic disciplines and their roots in different knowledge characteristics has been used by those interested in university life and work since the early 1990s This book draws together research data and theory to show how higher education has gone through major change since then and how social theory has evolved in parallel Together these changes mean there is a need to re theorise academic life in a way which reflects changed contexts in universities in the twenty first century and so a need for new metaphors Using a social practice approach the editors and contributors argue that disciplines are alive and well but that in a turbulent environment where many other forces conditioning academic practices exist their influence is generally weaker than before However the social practice approach adopted in the book highlights how this influence is contextually contingent how disciplines are deployed in different ways for different purposes and with varying degrees of purchase This important book pulls together the latest thinking on the subject and offers a new framework for conceptualising the influences on academic practices in universities It brings together a distinguished group of scholars from across the world to address questions such as Have disciplines been displaced by inter disciplinarity having outlived their usefulness Have other forces acting on the academy pushed disciplines into the background as factors shaping the practices of academics and students there How significant are disciplinary differences in teaching and research practices What is their significance in

Schmidt, 2006-02-17 Upspeeding technological evolution and globalisation characterise today's and future lives of engineers. It is vital for all institutions involved in engineering education to keep pace and to anticipate future needs. The herein presented collection of papers results from the Workshop on Global Engineering Education GEE 3 which took place at Aachen University of Technology 18-20 October 2000. In this meeting more than 150 specialists from 25 countries discussed the topic *Educating the Engineer for the Century*. Which role to attribute to non-technical qualifications? How to integrate ethical aspects in education? Do we have to define international standards in education? What about quality control? What is the potential of new media for knowledge transfer? How to organise lifelong learning for engineers? These are some of the questions discussed among representatives of industries, educational institutions, politicians and individuals during this meeting. According to the sessions of the workshop, the book is subdivided into chapters covering the areas: Role of the Global Engineer in Meeting the Challenges of Society in the Century; Internationality and Interdisciplinarity; Engineering Education in Emerging Economies; European Bachelor and Master Programmes; Developing Personal Skills to be a Global Engineer. Three chapters deal with successful practice in engineering education covering the topics: Programmes, Curricula and Evaluation; Educational Concepts and University Industry Partnership; Design Projects.

Implementing Communities of Practice in Higher Education Jacquie McDonald, Aileen Cater-Steel, 2016-11-23 In this edited collection, the authors pick up the communities of practice (CoP) approach of sharing practice in their reflection on the experience of taking their CoP vision from a dream to reality. Their stories articulate the vision, the passion and the challenge of working within and/or changing existing institutional culture and practice. The book discusses strategies that worked and considers the lessons learnt to inspire future dreamers and schemers. The multiple perspectives provided in the case studies will assist higher education leaders as well as academic and professional staff in establishing or assessing CoPs. The book offers insights into implementation strategies, practical guidelines and ideas on how CoP theoretical underpinnings can be tailored to the

higher education context *Shaping Our World* Gretar Tryggvason, 2011-11 Engineering education is currently on the verge of a major transformation. However, while the need has been much discussed and several proposals for change have been put forward, relatively little focus has been put on actual implementation of the proposed changes. This book examines a program that has a long history of experimentation in engineering education. Written by experts on the subject, it describes specific topics with each chapter focusing on a specific innovation that has been carried out and explaining the educational pedagogy, the learning benefit, as well as the transferability of the approach. **Projects in Undergraduate Engineering,**
