

Electromagnetic Energy and Light

How does light travel? Do different colors of light travel at the same speed?

What?

Light is electromagnetic energy. The visible light spectrum is a tiny part of the electromagnetic spectrum. The wavelength of light is the distance between two peaks (or troughs) of a wave. The frequency of light is the number of waves that pass a point in a given amount of time. The speed of light is the distance that light travels in a given amount of time. The speed of light is constant in a vacuum, but it slows down when it travels through a medium like water or glass. The refractive index of a medium is a measure of how much it slows down light. The refractive index of a medium is the ratio of the speed of light in a vacuum to the speed of light in the medium.
