Handbook Second Edition aims to provide a cross section of analytical techniques commonly used for proteins and peptides
thus providing a benchtop manual and guide for those who are new to the protein chemistry laboratory and for those more
established workers who wish to use a technique for the first time All chapters are written in the same format as that used in
the Methods in Molecular Biology™ series Each chapter opens with a description of the basic theory behind the method
being described The Materials section lists all the chemicals reagents buffers and other materials necessary for carrying out
the protocol Since the principal goal of the book is to provide experimentalists with a full account of the practical steps
necessary for carrying out each protocol successfully the Methods section contains detailed step by step descriptions of every
protocol that should result in the successful execution of each method The Notes section complements the Methods material
by indicating how best to deal with any problem or difficulty that may arise when using a given technique and how to go
about making the widest variety of modifications or alterations to the protocol Since the first edition of this book was
