C Programming for the PC, the Mac, and the Arduino Microcontroller System Peter D. Minns, 2013-11-12 Many systems today use the C programming language as it is available for most computers. This book looks at how to produce C programs to execute on a PC or a MAC computer. It also looks at the Arduino UNO microcontroller and describes how to write C programs using the Arduino-wired C functions as well as using standard ANSI C with direct access to the microcontroller registers of the Arduino UNO. This can lead to improved efficiency of the programs. Most of the hardware available in the Arduino microcontroller is described, and programs are provided showing how to control and use them. There is a chapter on how to create your own programs and also how to change a program created to execute on the Arduino so that it can run on a different microcontroller such as the Microchip PIC. This allows the Arduino to be used as a rapid prototype system. The book also contains many working program examples with additional workshop exercises for the reader to study.
