

Boil-Off Gas handling onboard LNG fuelled ships

By Dr. Ravi K. Sankar, Director, Research and Development, Indian Institute of Technology, Kharagpur, India

Boil-off gas (BOG) is a by-product of the liquefaction process. It is a mixture of methane and ethane, which is released from the LNG tankers. The BOG is a valuable resource and can be used as a fuel for the ship's engines. However, the BOG handling system is a complex one, and it requires a lot of attention to ensure the safety of the ship and the environment.

The BOG handling system is a complex one, and it requires a lot of attention to ensure the safety of the ship and the environment. The BOG is a valuable resource and can be used as a fuel for the ship's engines. However, the BOG handling system is a complex one, and it requires a lot of attention to ensure the safety of the ship and the environment.

The BOG handling system is a complex one, and it requires a lot of attention to ensure the safety of the ship and the environment. The BOG is a valuable resource and can be used as a fuel for the ship's engines. However, the BOG handling system is a complex one, and it requires a lot of attention to ensure the safety of the ship and the environment.

The BOG handling system is a complex one, and it requires a lot of attention to ensure the safety of the ship and the environment. The BOG is a valuable resource and can be used as a fuel for the ship's engines. However, the BOG handling system is a complex one, and it requires a lot of attention to ensure the safety of the ship and the environment.
