Logical Reasoning Documentcloud:

Logic of Feeling Luke Munn, 2020-12-04 From the virulence of fake news to the rise of psychographic profiling emotion has become ascendant The new frontier of capitalization is not outward but inward the inner life of affect and emotion desire and disposition This book lays that new reality out with a series of close case studies A new set of technologies are emerging from facial coding to affective computing that attempt to render the emotional into the machine readable At the same time social media and smart home devices are becoming empathic attempting to draw out our affective participation and elicit our emotional expression In these encounters with the medial and the technical the emotional is remade Combining a close analysis of contemporary technologies such as Affectiva Facebook and Alexa with critical media theory *Logic of Feeling* Technology's Quest to Capitalize Emotion examines how the quest to operationalize this inner life begins to reconfigure feeling itself

Educating for Critical Consciousness George Yancy, 2019-04-23 In this politically and democratically urgent collection George Yancy and contributors argue that more than ever we are in need of classrooms that function dangerously that is classrooms where people are not afraid to engage in critical discussions that call into question difficult political times Collectively they demonstrate the ways activist authors and scholars must be prepared to engage in risk and vulnerability as a defense of our democratic right to practice forms of pedagogical transgression Ideal for scholars and students of critical pedagogy philosophy of education and political theory this collection delineates the necessity of critical consciousness through education and provides ways of speaking back against authoritarian control of imaginative and critical capacities

The Mystery of Rationality Gérald Bronner, Francesco Di Iorio, 2018-07-12 This book contributes to the developing dialogue between cognitive science and social sciences It focuses on a central issue in both fields i.e the nature and the limitations of the rationality of beliefs and action The development of cognitive science is one of the most important and fascinating intellectual advances of recent decades and social scientists are paying increasing attention to the findings of this new branch of science that forces us to consider many classical issues related to epistemology and philosophy of action in a new light Analysis of the concept of rationality is a leitmotiv in the history of the social sciences and has involved endless disputes Since it is difficult to give a precise definition of this concept and there is a lack of agreement about its meaning it is possible to say that there is a mystery of rationality What is it to be rational Is rationality merely instrumental or does it also involve the endorsement of values i.e the choice of goals Should we consider rationality to be a normative principle or a descriptive one Can rationality be only Cartesian or can it also be argumentative Is rationality a conscious skill or a partly tacit one This book which has been written by an outstanding collection of authors including both philosophers and social scientists tries to make a useful contribution to the debates on these problems and shed some light on the mystery of rationality The target audience primarily comprises researchers and experts in the field
