History and Precedent in Environmental Design Anatol

Rapoport,2013-06-29 This book is about a new and different way of approaching and studying the history of the built environment and the use of historical precedents in design However although what I am proposing is new for what is currently called architectural history both my approach and even my conclusions are not that new in other fields as I discovered when I attempted to find supporting evidence In fact of all the disciplines dealing with various aspects of the study of the past architectural history seems to have changed least in the ways I am advocating There is currently a revival of interest in the history of architecture and urban form a similar interest applies to theory vernacular design and culture environment relations After years of neglect the study of history and the use of historical precedent are again becoming important However that interest has not led to new approaches to the subject nor have its bases been examined This I try to do In so doing I discuss a more rigorous and I would argue a more valid way of looking at historical data and hence of using such data in a theory of the built environment and as precedent in environmental design Underlying this is my view of Environment Behavior Studies CEBS as an emerging theory rather than as data to help design based on current theory Although this will be the subject of another book a summary statement of this position may be useful

Media Review Digest C. Edward Wall, 1988 Sleep Disorders and Sleep Deprivation Institute of Medicine, Board on Health Sciences Policy, Committee on Sleep Medicine and Research, 2006-10-13

Clinical practice related to sleep problems and sleep disorders has been expanding rapidly in the last few years but scientific research is not keeping pace Sleep apnea insomnia and restless legs syndrome are three examples of very common disorders for which we have little biological information This new book cuts across a variety of medical disciplines such as neurology pulmonology pediatrics internal medicine psychiatry psychology otolaryngology and nursing as well as other medical practices with an interest in the management of sleep pathology This area of research is not limited to very young and old patients sleep disorders reach across all ages and ethnicities Sleep Disorders and Sleep Deprivation presents a structured analysis that explores the following Improving awareness among the general public and health care professionals Increasing investment in interdisciplinary somnology and sleep medicine research training and mentoring activities Validating and developing new and existing technologies for diagnosis and treatment This book will be of interest to those looking to learn more about the enormous public health burden of sleep disorders and sleep deprivation and the strikingly limited capacity of the health care enterprise to identify and treat the majority of individuals suffering from sleep problems
