Mathematics for Healthcare Krasimira Tsaneva-Atanasova, Vanessa Diaz-Zuccarini, 2018-09-28 In 1996 and with extraordinary prescience Panfilov and Holden had highlighted in their seminal book Computational Biology of the Heart that biology was potentially the most mathematical of all sciences Fast forward 20 years and we have seen an explosion of applications of mathematics in not only biology but healthcare that has already produced significant breakthroughs not imaginable more than 20 years ago Great strides have been made in explaining through quantitative methods the underlying mechanisms of human disease not without considerable ingenuity and effort Biological mechanisms are bewildering complex ever evolving multi scale variable difficult to fully access and understand This poses immense challenges to the computational physiology community that nevertheless has developed an impressive arsenal of tools and methods in a vertiginous race to combat disease with the tall order of improving human healthcare Mechanistic models are now contending with the advent of machine learning in healthcare and the hope is that both approaches will be used synergistically since the complexity of human pathophysiology and the difficulty of acquiring human datasets will require both deductive and inductive methods This Research Topic presents work that is currently at the frontier in computational physiology with a striking range of applications from diabetes to graft failure and using a multitude of mathematical tools This collection of articles represents a snapshot in a field that is moving a dizzying speed bringing understanding of fundamental mechanism and solutions to healthcare problems experienced by healthcare systems all over the world

Artificial Assemblies with Cooperative DNA Recognition Zutao YU, 2020-05-09 This book presents three types of synthetically cooperative DNA recognizing assemblies in order to advance the development of programmable DNA binding pyrrole imidazole polyamides PIPs PIPs represent the best characterized class of small molecule DNA binders that can be modified to bind with any predetermined DNA sequence and regulate gene expression patterns in a transgene free and cost effective manner PIPs are characterized by their small molecular size high binding affinity programmability sequence selectivity and moderate cell permeability In recent years there have been numerous novel studies on the applications of these biological tools this research is thoroughly reviewed in the first chapter There are several critical issues however that impede the further broad study of PIPs which greatly concern the author For instance the short PIP version has an excessively high 10 bp this significantly decreases cell permeability Moreover the conventional binding strategy for PIP design cannot apply to flexible DNA binding for example the DNA binding mode of a transcription factor pair In this book the author describes the development of three kinds of cooperative DNA binding systems that help resolve the current highly problematic issues concerning PIPs These three systems offer a range of significant advantages such as favorable sequence selectivity long recognition sequence higher binding affinity and a flexible gap distance Released at a critical juncture in the application of PIPs this book will greatly facilitate their use as therapeutic drugs in the treatment of cancer
