Natural Disasters and Sustainable Development Riccardo Casale, Claudio Margottini, 2013-06-29 Natural disasters are a clear example of people living in conflict with the environment. Disasters cause human social and environmental losses and sometimes even threaten geopolitical stability as in many less developed countries. They are also a problem of global concern even when damage is local; the mechanisms are often dependent on global meteorological climatic circulation. Losses frequently affect several countries as could be seen in the floods in central Europe in 2002. It is obvious that there is a clear need for a new approach capable of incorporating the prevention of natural disasters whilst mitigating strategies within the cycle of sustainable development. There are no thematic disciplines or political boundaries limiting initiatives; the integration of data providers, data users, information providers and information users in a global and holistic manner is the desired outcome of the new frontier. This book falls into this new category: multidisciplinary interventions and socio-economic points of view are the basic inputs for a changing science implementing sustainable development for the benefit of citizens and society. It is comprised of studies and investigations which explain natural processes and modelling as well as assessing hazards and risks and is rounded off with suggestions for sustainable development. Thus reflecting the best results of research on this topic funded by the European Commission.

Natural Disasters, Cultural Responses Christof Mauch, Christian Pfister, 2009-03-16 Catastrophes it seems are becoming more frequent in the twenty-first century. According to UN statistics every year approximately two hundred million people are directly affected by natural disasters—seven times the number of people who are affected by war. Discussions about global warming and fatal disasters such as Katrina and the Tsunami of 2004 have heightened our awareness of natural disasters and of their impact on both local and global communities. Hollywood has also produced numerous disaster movies in recent years some of which have become blockbusters. This volume demonstrates that natural catastrophes—earthquakes, hurricanes, floods etc.—have exercised a vast impact on humans throughout history and in almost every part of the world. It argues that human attitudes toward catastrophes have changed over time. Surprisingly this has not necessarily led to a reduction of exposure or risk. The organization of the book resembles a journey around the globe—from Europe to North Africa, the Middle East and Asia and from the Pacific through South America and Mexico to the United States. While natural disasters appear everywhere on the globe, different cultures, societies and nations have adopted specific styles for coping with disaster. Indeed how humans deal with catastrophes depends largely on social and cultural patterns, values, religious belief systems, political institutions and economic structures. The roles that catastrophes play in society and the meanings they are given vary from one region to the next; they differ—and this is one of the principal arguments of this book—from one cultural, political and geographic space to the next. The essays collected here help us to understand not only how people in different times throughout history have learned to cope with disaster but also how humans in different parts of the world have developed specific cultural, social and technological strategies for doing so.
