

Chapter 1 The Nature of Science

Section 1 The Methods of Science

A. Science studies natural patterns.

1. Science is classified into three main categories: life science, Earth science, and physical science; sometimes a scientific study will overlap the categories.
2. Science explains the natural world; explanations can change over time.
3. Scientists investigate nature by observation, experimentation, or modeling.

B. Scientific method—organized set of investigation procedures

1. State a problem.
2. Gather information.
3. Form a **hypothesis** or educated guess based on knowledge and observation.
4. An **experiment with variables** is a common way to test a hypothesis.
 - a. A **dependent variable** changes value as other variables change.
 - b. An **independent variable** is changed to determine how it will affect the dependent variable.
 - c. A variable that does not change when other variables change is a **constant**.
 - d. A **control** is the standard to which test results can be compared.
5. Analyze data from an experiment or investigation.
6. Form a conclusion based on the data.
7. Reduce **bias** by keeping accurate records, using measurable data, and repeating the experiment.

C. Models represent ideas, events, or objects and can be physical or computerized.

D. A theory is an explanation based on many observations and investigations; a **scientific law** is a statement about something that always seems to be true.

E. Science deals with the natural world; questions of value or emotion cannot be answered.

F. Technology—applied science helping people

Section 2 Standards of Measurement

A. Standard—exact quantity that people agree to use for comparison

B. Measurements must have a number and a unit.

1. **SI**—an improved version of the metric system used and understood by scientists worldwide
2. SI system is based on multiples of 10 and uses prefixes to indicate a specific multiple.

C. Length is measured using a unit appropriate for the distance between two points.

D. Volume—the amount of space an object occupies

E. Mass—measure of matter in an object

1. **Density**—mass per unit volume of a material
2. A unit obtained by combining different SI units is called a **derived unit**.

F. Time is the interval between two events; temperature is measured using a thermometer.

Section 3 Communicating with Graphs

A. Graph—visual display of information or data that is used to detect patterns

B. A line graph shows a relationship where the dependent variable changes due to a change in the independent variable.

1. The scale should make the graph readable.
2. The *x*-axis should always be used for the independent variable.
3. Units of measurement must be consistent.

C. Bar graphs compare information collected by counting.

D. Circle graphs show how a whole is broken into parts.

Nature Of Science 27 Worksheet Section 1:

The Nature of Science Dorothy Warren, 2001 There are many different approaches to science Many students in school have a view of science that is far removed from the real world practice of science and they too often consider science to be a defined body of knowledge and scientists to know all the answers Through a series of exercises this book tries to give students an awareness of the processes of science and of the nature of science as a changing body of knowledge with uncertainties and much remaining to be discovered It is hoped that by using it teachers can communicate to their students some of the wonder and excitement of science and encourage the development of future generations of scientists The Nature of Science includes a range of activities designed to look at different aspects of the nature of science and to teach investigative skills to 11 19 year old students It contains teachers notes background information photocopiable student worksheets and answers
