Menor-Salván, 2018-08-01 The origin of life is one of the biggest unsolved scientific questions This book deals with the formation and first steps of the chemical evolution of nucleic acids including the chemical roots behind the origin of their components from the simplest sources in a geochemical context Chemical evolution encompasses the chemical processes and interactions conducive to self assembly and supramolecular organization leading to an increase of complexity and the emergence of life The book starts with a personal account of the pioneering work of Stanley Miller and Jeffrey Bada on the Chemistry of Origins of Life and how the development of organic chemistry beginning in the 19th century led to the emergence of the field of prebiotic chemistry situated at the frontier between organic geo and biochemistry It then continues reviewing in tutorial manner current central topics regarding the organization of nucleic acids the origin of nucleobases and nucleosides their phosphorylation and polymerization and ultimately their self assembly and supramolecular organization at the inception of life *Bikeri* Attila Gyucha, William A. Parkinson, Richard W. Yerkes, 2021-11-15 The transition from the

Neolithic period to the Copper Age in the northern Balkans and the Carpathian Basin was marked by significant changes in material culture settlement layout and organization and mortuary practices that indicate fundamental social transformations in the middle of the fifth millennium BC Prior research into the Late Neolithic of the region focused almost exclusively on fortified tell settlements The Early Copper Age by contrast was known primarily from cemeteries such as the type site of

Tiszapolgar Basatanya This edited book describes the multi disciplinary research conducted by the Koros Regional Archaeological Project in southeastern Hungary from 2000 2007 Centered around two Early Copper Age Tiszapolgar culture villages in the Koros Region of the Great Hungarian Plain Veszto Bikeri and Korosladany Bikeri our research incorporated excavation surface collection geophysical survey and soil chemistry to investigate settlement layout and organization Our results yielded the first extensive systematically collected datasets from Early Copper Age settlements on the Great Hungarian Plain The two adjacent villages at Bikeri located only 70 m apart were similar in size and both were protected with fortifications Relative and absolute dates demonstrate that they were occupied sequentially during the Early Copper Age from ca 4600 4200 cal B C The excavated assemblages from the sites are strikingly similar suggesting that both were occupied by the same community This process of settlement relocation after only a few generations breaks from the longer lasting settlement pattern that are typical of the Late Neolithic but other aspects of the villages continue traditions that were established during the preceding period including the construction of enclosure systems and longhouses
