**Modeling and Flowsheet Simulation of Vibrated Fluidized Bed Dryers (Band 18)** Sören Ernst Lehmann,2021-12-07 Fluidized bed dryers are the prime choice when it comes to drying of heat sensitive products commonly processed in the pharmaceutical and food industry As many products in these industries are ne and cohesive mechanical vibration of the dryer is used to enable or improve uidization Thus the goal of this thesis is the development of a uidized bed drying model that accounts for the in uence of mechanical vibration of the dryer as well as its implementation in an open source owsheet simulation framework Continuously operated uidized bed dryers under steady state conditions are the focus of this thesis The aim during model development and implementation is the broadest possible application range of the model A custom built vibrated uidized bed dryer is designed and constructed for comprehensive investigations of uidized bed hydrodynamics and drying kinetics Based on experimental investigations a semi empirical model for hydrodynamics of ne and cohesive powders is developed The new model is combined with established models to allow for the owsheet simulation of uidized bed dryers for particles of all Geldart groups Additionally the in uence of vibration is accounted for Comprehensive validation experiments are performed for particles of different Geldart groups different dryer geometries and a variety of process

parameters including mechanical vibration Comparison of model predictions with experimental data attributes high accuracy of predicted particle and gas properties Furthermore sensitivity analyses are conducted to identify potential weaknesses in underlying model assumptions Hereby the validity of underlying assumptions is confirmed and potential optimization parameters for different applications are identified The proposed model is unprecedented in terms of range of process parameters variety of particle properties and dryer geometries tested and found valid for Ruggles-Coles Rotary Dryers, Kilns, Coolers Hardinge Company, Inc,1949 *Fluidized Bed Drying* Vojtěch Vaněček,Miroslav Markvart,Radek Drbohlav,1966 *Fluidized Bed Drying* James Gerard Gerstle,1980 The use of a fluidized bed dryer to dry acrylonitrile butadiene styrene terpolymer was studied Data for fluidized bed drying were obtained from the Monsanto Company's fluid bed dryer Fluid bed theory drying phenomena and fluid bed drying limitations were investigated With the theory of fluidization and drying a mathematical model of the system was derived and a computer program to perform the simulation was written The program varied temperature of inlet air humidity of the inlet air and inlet air flow rate The program was run for eight different operating conditions involving changes in inlet solid moisture content outlet solid moisture content and inlet solid flow rates The model suggests that the Monsanto dryer may have too short a residence time The possibility of increasing the solid flow rate to the dryer was also investigated Increasing solid flow rate to the dryer would cause a significant amount of particle entrainment **Modelling and Simulation of a Fluid Bed Dryer** Rafael Sanabria,1979
