Bratley, B. L.

Fox, L. E. Schrage, 2012-12-06 Simulation means driving a model of a system with suitable inputs and observing the corresponding outputs. It is widely applied in engineering, in business and in the physical and social sciences. Simulation methodology draws on computer science, statistics and operations research and is now sufficiently developed and coherent to be called a discipline in its own right. A course in simulation is an essential part of any operations research or computer science program. A large fraction of applied work in these fields involves simulation. The techniques of simulation as tools are as fundamental as those of linear programming or compiler construction. For example, simulation sometimes appears deceptively easy, but perusal of this book will reveal unexpected depths. Many simulation studies are statistically defective and many simulation programs are inefficient. We hope that our book will help to remedy this situation. It is intended to teach how to simulate effectively. A simulation project has three crucial components, each of which must always be tackled: 1. data gathering, model building and validation; 2. statistical design and estimation; 3. programming and implementation. Generation of random numbers. Chapters 5 and 6 pervade simulation, but unlike the three components above, random number generators need not be constructed from scratch for each project. Usually random number packages are available. That is one reason why the chapters on random numbers, which contain mainly reference material, follow the chapters dealing with experimental design and output analysis.

**Water Resources Management** V.C.A. Brebbia, V. Popov, 2009-08-21 Water resources upon which the well-being of future generations depends are under extreme pressure today all over the world. Resulting problems have given rise to many issues including water quality, quantity, management and planning, and reflect the growing concern and importance accorded to their sustainable management. The Fifth International Conference on Water Resources Management presents the more recent technological and scientific developments associated with the management of surface and sub-surface water resources. The papers are grouped under the following topics: Water Management and Planning, Waste Water Treatment and Re-use, Water Quality, Pollution Control, Management and Economics, Decision Support Systems, Hydraulic Systems, Flood Risk, Hydraulic Modelling, Irrigation Problems, Governance and Monitoring.

**Handbook of Metallurgical Process Design** George E. Totten, Kiyoshi Funatani, Lin Xie, 2004-05-25 Reviewing an extensive array of procedures in hot and cold forming, casting, heat treatment, machining and surface engineering of steel and aluminum, this comprehensive reference explores a vast range of processes relating to metallurgical component design, enhancing the production and the properties of engineered components while reducing manufacturing costs. It surveys the role of computer simulation in alloy design and its impact on material structure and mechanical properties such as fatigue and wear. It also discusses alloy design for various materials including steel, iron, aluminum, magnesium, titanium, super alloy compositions and copper.
