

Chapter 13 – How Populations Evolve: Explaining the Diversity of Life

Charles Darwin - *On the Origin of Species by Means of Natural Selection*, 1859.

What was before Darwin?

Aristotle -

Jean-Baptiste de Lamarck, 1800s

Refinement of traits, organisms successful in environment

Change over time, but

Charles Darwin and *The Origin of Species*

Charles Darwin

proposed a hypothesis, evidence

Five-year voyage on the HMS Beagle -

Naturalist - collected thousands of specimens and observed various adaptations in organisms

New Insights

Darwin was strongly influenced by the writings of geologist Charles Lyell.

Lyell suggested that Earth is

Thus, extended time scale allowing gradual changes to occur in species and in geologic features

Darwin returns to England

Gathers data and comes up with:

"descent with modification"

Proposes a mechanism - natural selection.

In natural selection, individuals with certain inherited traits are

Evolution: Darwin's Theory

Alfred Russell Wallace

Worked in Indonesia

mid 1850's, developed similar ideas to Darwin

Presented to the scientific community

Soon after Darwin publishes *On the Origin of Species by Means of Natural Selection*

Controversial

More than just a hypothesis, theory

Verified by more than 150 years of research.

Darwin publishes *On the Origin of Species by Means of Natural Selection*, making two proposals:

1. Existing species descended from
2. Natural selection is

Evolution - Genetic change in a population or species over generations

Population -

Living species are descendants of ancestral species that were different from present-day ones.

Evidence of Evolution

Biological evolution has left evidence:

Evidence from Fossils

Fossils - imprints or remains of organisms that lived in the past

Sedimentary rock

Paleontologists -

Not all fossils are the actual remnants of organisms.

Sometimes, an entire organism is preserved

Amber, Frozen in ice, Preserved in bogs

The Routledge Handbook of Evolution and Philosophy Richard Joyce, 2017-08-16

In recent years the relation between contemporary academic philosophy and evolutionary theory has become ever more active multifaceted and productive

The connection is a bustling two way street

In one direction philosophers of biology make significant contributions to theoretical discussions about the nature of evolution such as

What is a species

What is reproductive fitness

Does selection operate primarily on genes and

What is an evolutionary function

In the other direction a broader group of philosophers appeal to Darwinian selection in an attempt to illuminate traditional philosophical puzzles such as

How could a brain state have representational content

Are moral judgments justified

Why do we enjoy fiction and

Are humans invariably selfish

In grappling with these questions this interdisciplinary collection includes cutting edge examples from both directions of traffic

The thirty contributions written exclusively for this volume are divided into six sections

The Nature of Selection

Evolution and Information

Human Nature

Evolution and Mind

Evolution and Ethics and

Evolution Aesthetics and Art

Many of the contributing philosophers and psychologists are international leaders in their fields

Practical Computer Vision Applications Using Deep Learning with CNNs Ahmed Fawzy Gad, 2018-12-05

Deploy deep learning applications into production across multiple platforms

You will work on computer vision applications that use the convolutional neural network CNN deep learning model and Python

This book starts by explaining the traditional machine learning pipeline where you will analyze an image dataset

Along the way you will cover artificial neural networks ANNs building one from scratch in Python before optimizing it using genetic

algorithms For automating the process the book highlights the limitations of traditional hand crafted features for computer vision and why the CNN deep learning model is the state of art solution CNNs are discussed from scratch to demonstrate how they are different and more efficient than the fully connected ANN FCNN You will implement a CNN in Python to give you a full understanding of the model After consolidating the basics you will use TensorFlow to build a practical image recognition model that you will deploy to a web server using Flask making it accessible over the Internet Using Kivy and NumPy you will create cross platform data science applications with low overheads This book will help you apply deep learning and computer vision concepts from scratch step by step from conception to production What You Will Learn Understand how ANNs and CNNs work Create computer vision applications and CNNs from scratch using Python Follow a deep learning project from conception to production using TensorFlow Use NumPy with Kivy to build cross platform data science applications Who This Book Is For Data scientists machine learning and deep learning engineers software developers

The Role of Population Games in the Design of Optimization-Based Controllers Julian Barreiro-Gomez, 2018-08-01 This book reports on the implementation of evolutionary game theory in the design of distributed optimization based controllers First it discusses how the classical population game approach can contribute to and complement the design of optimization based controllers It shows how the features of this approach can be exploited to extend their capabilities in the solution of distributed optimization problems and examines density games in order to consider multiple coupled constraints and preserve the non centralized information requirements Furthermore it establishes a close relationship between the possible interactions among agents in a population with constrained information sharing among different local controllers It also discusses coalitional games focusing on the Shapley power index and proposes an alternative method of computing the latter which reduces computational time as well as a different way of finding it using distributed communication structures All the proposed strategies are then tested on various control problems such as those related to the Barcelona water supply network multiple continuous stirred tank reactors various unmanned aerial vehicle systems and a water distribution system This thesis examined at the Universitat Politècnica de Catalunya and Universidad de los Andes in 2017 received the award for best thesis in control from the control group of the Spanish Committee of Automatic Control CEA in the same year
