Virtual Educational Therapy Marion E. Marshall, 2022-06-20 Virtual Educational Therapy presents a board certified educational therapist's year long case study of clinical supports and advocacy for a student with learning disabilities who is attending school remotely during the COVID 19 pandemic. With online and blended learning now the norm in K 12 education, educational therapists need new models of intervention, treatment, and relationship building for their child age clients. This book offers detailed single case research focused on a middle school student who is learning virtually while challenged with ADHD as well as visual and verbal memory issues but who is nonetheless found ineligible for special education services. Across eight chapters, author and renowned educational therapist Marion E. Marshall describes the neuropsychological principles, research based techniques, personal interactions, clinical approaches, and advocacy efforts that led to a vulnerable student's significant gains in academic skills and outcomes.

Building a Better Robot Danny Kurt, The field of robotics is undergoing an unprecedented period of growth and innovation, transforming industries and redefining our relationship with technology. *Building a Better Robot: The Science and Creativity of Robotics Engineering* provides a comprehensive introduction to this dynamic world, bridging the gap between theoretical understanding and practical application. This book is designed to be accessible to a wide audience, from high school students exploring potential career paths to seasoned professionals seeking to broaden their knowledge. We will delve into the fundamental principles that underpin robot design, encompassing mechanical engineering, control systems, programming, and the crucial element of creative problem solving. We will trace the evolution of robotics from its early origins in simple automata to today's sophisticated AI powered systems. This historical perspective is essential to understanding the trajectory of the field and the challenges that have been overcome to reach its current level of advancement. The book delves into a wide array of topics, including kinematic and dynamic analysis, material selection, actuator and sensor technology, control algorithm design, and software development practices specific to robotics. We will also explore the role of sensors in enabling robots to perceive and interact with their environments, covering topics such as computer vision, sensor fusion, and environmental mapping. This book will discuss various robot configurations, from wheeled and legged robots to the specialized designs used in industrial automation. Further, we will investigate the crucial role of robotics in emerging fields such as medicine, space exploration, agriculture, and environmental monitoring.
