Brebbia, P.W. Partridge, 2012-12-06 This book Boundary Elements in Fluid Dynamics is

the second volume of the two volume proceedings of the International Conference on Computer Modelling of Seas and Coastal Regions and Boundary Elements and Fluid Dynamics held in Southampton U K in April 1992 The Boundary Element Method BEM is now fully established as an accurate and successful technique for solving engineering problems in a wide range of fields The success of the method is due to its advantages in data reduction as only the boundary of the region is modelled Thus moving boundaries may be more easily handled which is not the case if domain methods are used In addition the method is easily able to model regions extending to infinity Fluid mechanics is traditionally one of the most challenging areas of engineering the simulation of fluid motion particularly in three dimensions is always a serious test for any numerical method and is an area in which BEM analysis may be used taking full advantage of its special characteristics The conference includes sections on turbomachinery aerodynamics viscous flow and turbulence models and special flow situations The organisers would like to thank the International Scientific Advisory Committee the conference delegates and all of those who have actively supported the meeting

High Performance Computing in Power and Energy Systems Siddhartha Kumar Khaitan, Anshul Gupta, 2012-09-13 The twin challenge of meeting global energy demands in the face of growing economies and populations and restricting greenhouse gas emissions is one of the most daunting ones that humanity has ever faced Smart electrical generation and distribution infrastructure will play a crucial role in meeting these challenges We would need to develop capabilities to handle large volumes of data generated by the power system components like PMUs DFRs and other data acquisition devices as well as by the capacity to process these data at high resolution via multi scale and multi period simulations cascading and security analysis interaction between hybrid systems electric transport gas oil coal etc and so on to get meaningful information in real time to ensure a secure reliable and stable power system grid Advanced research on development and implementation of market ready leading edge high speed enabling technologies and algorithms for solving real time dynamic resource critical problems will be required for dynamic security analysis targeted towards successful implementation of Smart Grid initiatives This book aims to bring together some of the latest research developments as well as thoughts on the future research directions of the high performance computing applications in electric power systems planning operations security markets and grid integration of alternate sources of energy etc
