Model-Reference Robust Tuning of PID Controllers Victor M. Alfaro, Ramon Vilanova, 2016-04-16 This book presents a unified methodology for the design of PID controllers that encompasses the wide range of different dynamics to be found in industrial processes This is extended to provide a coherent way of dealing with the tuning of PID controllers The particular method at the core of the book is the so called model reference robust tuning MoReRT developed by the authors MoReRT constitutes a novel and powerful way of thinking of a robust design and taking into account the usual design trade offs encountered in any control design problem The book starts by presenting the different two degree of freedom PID control algorithm variations and their conversion relations as well as the indexes used for performance robustness and fragility evaluation the bases of the proposed model Secondly the MoReRT design methodology and normalized controlled process models and controllers used in the design are described in order to facilitate the formulation of the different design problems and subsequent derivation of tuning rules Inlater chapters the application of MoReRT to over damped inverse response integrating and unstable processes is described The book ends by presenting three possible extensions of the MoReRT methodology thereby opening the door to new research developments In this way the book serves as a reference and source book for academic researchers who may also consider it as a stimulus for new ideas as well as for industrial practitioners and manufacturers of control systems who will find appropriate advanced solutions to many application problems Methods for Industrial Critical Systems Alberto Lluch Lafuente, Anastasia Mavridou, 2021-08-19 This book constitutes the proceedings of the 26th International Workshop on Formal Methods for Industrial Critical Systems FMICS 2021 which was held during August 24 26 2021 The conference was planned to take place in Pairs France Due to the COVID 19 pandemic it changed to a virtual event The 10 full papers and 6 short papers presented in this volume were carefully reviewed and selected from 31 submissions The papers are organized in topical sections as follows Verification Program Safety and Education Event B Modeling and Validation Formal Analysis Tools Test Generation and Probabilistic Verification Smart Microgrids Majid Naveripour, Mostafa Kheshti, Eberhard Waffenschmidt, 2018-07-11 Public support and feed in tariff as a nonvariable compensation for the electric power production of energy have suppressed the risky investment of distributed generators DGs in smart distribution systems SDSs Although the using renewable energy technologies and the incorporation of plug in DGs into SDS may have positive effects on congestion management power loss reduction and sustainability they may create some difficulties relating to manage the system optimally by considering the intermittency of renewable
