

## Dream Computer Essay Example

When deciding what will run my dream computer, processor-wise that is, I am reminded of a friend's computer that last year, was running with two Pentium III's, running at 650 Megahertz a piece. This year he is looking to upgrade on this design. I however, will be able to take his idea, and with money being no object, destroy the speed and reliability of his computer by installing two, one gigahertz Pentium III's onto a Intel STL2 motherboard (\$899). I chose this motherboard for it being one of the few on the market that comes with the capability of supporting dual processors. I don't feel I need any more speed than 1 gigahertz, despite faster processors being on the market (namely the Pentium IV). I have yet to use any processors this fast, and I know for the most part the programs I use are incapable of running at too high of speed, let alone I don't need that much power. I certainly don't want to have to install any sort of cooling system in casing, as that would be extremely costly and hurt the electric bill. Since a megahertz is a million cycles per second, my processors would be capable of one billion cycles per second. One would think that with dual processors the speed would be double this, but the double processors don't double the speed, they just double the amount of programs and tasks you can run at that particular speed without jeopardizing any of the computer's integrity.

I love my computer running tons of programs at once, like even now as I'm writing this paper, I have two instances of Microsoft Internet Explorer running, AOL Instant Messenger with two windows associated with it, and some Mp3's playing. In my taskbar I have about 10 items, most of which I can't imagine living without. One is this Post-it notes program, which I now can't live without. It keeps me organized just as post-it notes do, but not they are on my computer screen as opposed to them falling off the edges of my monitor as they once did. Getting to my point, I would definitely go no slower than one gigabyte SDRAM. It is superior to regular RAM is that it adds a separate clock signal to the control signals. SDRAM chips can contain more complex state machines, allowing them to support "burst" access modes that clock out a series of successive bits. Yet what I really would prefer in my memory selection would be an option for RDRAM. RDRAM is used mainly for video accelerators, and also in the Nintendo 64. It offers sustained transfer rates of around

The World Computer Jonathan Beller, 2021-01-22

In The World Computer Jonathan Beller forcefully demonstrates that the history of commodification generates information itself Out of the omnipresent calculus imposed by commodification information emerges historically as a new money form Investigating its subsequent financialization of daily life and colonization of semiotics Beller situates the development of myriad systems for quantifying the value of people objects and affects as endemic to racial capitalism and computation Built

on oppression and genocide capital and its technical result as computation manifest as racial formations as do the machines and software of social mediation that feed racial capitalism and run on social difference Algorithms derived from for profit management strategies conscript all forms of expression language image music communication into the calculus of capital such that even protest may turn a profit Computational media function for the purpose of extraction rather than ameliorating global crises and financialize every expressive act converting each utterance into a wager Repairing this ecology of exploitation Beller contends requires decolonizing information and money and the scripting of futures wagered by the cultural legacies and claims of those in struggle

*The Design of Design* Frederick P. Brooks Jr.,2010-03-22 Making Sense of Design Effective design is at the heart of everything from software development to engineering to architecture But what do we really know about the design process What leads to effective elegant designs The Design of Design addresses these questions These new essays by Fred Brooks contain extraordinary insights for designers in every discipline Brooks pinpoints constants inherent in all design projects and uncovers processes and patterns likely to lead to excellence Drawing on conversations with dozens of exceptional designers as well as his own experiences in several design domains Brooks observes that bold design decisions lead to better outcomes The author tracks the evolution of the design process treats collaborative and distributed design and illuminates what makes a truly great designer He examines the nuts and bolts of design processes including budget constraints of many kinds aesthetics design empiricism and tools and grounds this discussion in his own real world examples case studies ranging from home construction to IBM s Operating System 360 Throughout Brooks reveals keys to success that every designer design project manager and design researcher should know

**Feels Like Far** Linda M. Hasselstrom,2001 In *Feels Like Far* award winning author Linda Hasselstrom paints an intimate portrait of family love work nature and survival against the backdrop of the far flung South Dakota prairie In a direct and unsentimental style Hasselstrom maps the landscape of her life demarcating the same beauties and brutalities that intermingle on the Great Plains she calls home

*My Mother Was a Computer* N. Katherine Hayles,2010-03-15 We live in a world according to N Katherine Hayles where new languages are constantly emerging proliferating and fading into obsolescence These are languages of our own making the programming languages written in code for the intelligent machines we call computers Hayles s latest exploration provides an exciting new way of understanding the relations between code and language and considers how their interactions have affected creative technological and artistic practices *My Mother Was a Computer* explores how the impact of code on everyday life has become comparable to that of speech and writing language and code have grown more entangled the lines that once separated humans from machines analog from digital and old technologies from new ones have become blurred *My Mother Was a Computer* gives us the tools necessary to make sense of these complex relationships Hayles argues that we live in an age of intermediation that challenges our ideas about language subjectivity literary objects and textuality This process of intermediation takes place where digital media interact with

cultural practices associated with older media and here Hayles sharply portrays such interactions how code differs from speech how electronic text differs from print the effects of digital media on the idea of the self the effects of digitality on printed books our conceptions of computers as living beings the possibility that human consciousness itself might be computational and the subjective cosmology wherein humans see the universe through the lens of their own digital age We are the children of computers in more than one sense and no critic has done more than N Katherine Hayles to explain how these technologies define us and our culture Heady and provocative *My Mother Was a Computer* will be judged as her best work yet
