Cheung, J. Fong, B. Siu, 2012-12-06 Modern computing management systems and application programs are often designed as open systems In an open environment the users application programs serving similar purposes though possibly implemented using different hardware or software technologies can interact easily and properly with one other But it is a big challenge in research and development to provide the means for integrating these technologies and reengineering the new or existing management systems so as to make all of the relevant components interoperable In case of databases because of the variety in data models and theory the interoperability and reengineering issues become even more complex and crucial especially for companies heavily involved in data management With the rapid advances in networking and database modeling technology old issues may have to be reinvestigated and new issues come up constantly It is our hope that this year's workshop the sixth in a series of annual events can provide a timely forum for database researchers and practitioners to share their recent experience and results in various aspects of this fast developing field This series of workshops has been organized by the Hong Kong Computer Society and financially supported by many local industrial and business companies This year the Cooperative Research Centre for Open Systems Technology located in the Department of Computer Science City University of Hong Kong has joined the organization team and the list of financial sponsors **Research Report**, 1988

*Information and Process Integration in Enterprises* Toshiro Wakayama, Srikanth Kannapan, Chan Meng Khoong, Shamkant Navathe, JoAnne Yates, 2012-12-06 *Information and Process Integration in Enterprises Rethinking Documents* is a bold attempt to address information and process integration issues as a single body of research and practice. This book has identified the concept of documents as a common thread linking the integration issues. Documents after all are representations of information along with representations of the usage of the information contained therein. Rethinking the role of documents is therefore central to re-engineering enterprises in the context of information and process integration. The chapters of this book are based on papers presented at the International Working Conference on Information and Process Integration in Enterprises IPIC 96 held at MIT on November 14 and 15 1996. The chapters cover a range of issues from the future role of documents in enterprise integration to emerging models of business processes and information use to practical experiences in implementing new processes and technologies in real work environments. *Information and Process Integration in Enterprises Rethinking Documents* is suitable as a secondary text for a graduate level course on information technology.
