Geometry David A. Brannan, Matthew F. Esplen, Jeremy J. Gray, 2011-12-22. This richly illustrated and clearly written undergraduate textbook captures the excitement and beauty of geometry. The approach is that of Klein in his Erlangen programme: a geometry is a space together with a set of transformations of the space. The authors explore various geometries: affine, projective, inversive, hyperbolic and elliptic. In each case they carefully explain the key results and discuss the relationships between the geometries. New features in this second edition include concise end of chapter summaries to aid student revision, a list of further reading and a list of special symbols. The authors have also revised many of the end of chapter exercises to make them more challenging and to include some interesting new results. Full solutions to the 200 problems are included in the text while complete solutions to all of the end of chapter exercises are available in a new Instructors Manual which can be downloaded from www.cambridge.org/9781107647831. *Geometry* D.
