Flexible Automation in Japan J. Hartley, 2013-04-09 Much has been said and written about Japan's manufacturing prowess. Most of the comment comes from people who are merely visitors to the country and can be best classified as observers looking in from the outside. Other views come from the Japanese themselves in which the double barrier of culture and language filters out much information that would be of real value to Western industrialists. Neither of these limitations apply to John Hartley who has been resident in Japan for the past five years. He understands the culture, can speak the language and has extensive contacts at the highest level. Therefore he is in a unique position to report on the Japanese scene and its activities in advanced manufacturing technology. This he has been doing on a regular basis to IFS magazines *The Industrial Robot*, *Assembly Automation*, *Sensor Review* and *The FMS Magazine*. Most of the material in this book is from John Hartley's pen and represents his most significant contributions on flexible automation in Japan to these journals over the last three years. It is augmented with a few other articles written by leading authorities on new technology in Japanese manufacturing industry.

[Routledge Revivals: The World Electronics Industry \(1990\)](#) Daniel Todd, 2018-02-05 First published in 1990, this book provides an overview of the global distribution of the electronics industry and the structural factors which promoted this distribution by the end of the 1980s. Regarded as a flagship sector in both advanced and developing countries, the electronics industry is encouraged by governments everywhere. Covering both the civilian and the

military sides of the industry Professor Todd reflects on the future of civilian electronics in the light of its global segmentation and hints at the fundamental role of governments in the unfolding of both civilian and defence electronics developments He also endorses the overwhelming significance of strategies being played by electronics enterprises in both the USA and Japan **Electronic Design** ,1988 **Scientific Information Bulletin** ,1992 **Structural Mechanics Software Series** ,1977 **Electronics** ,1966-10 June issues 1941 44 and Nov issue 1945 include a buyers guide section

Like many other new technologies which have since been seized and exploited by others the industrial robot is a British invention In 1957 a patent was produced by a British inventor Cyril Walter Kenward and later it became crucial to the future of robotics For across the Atlantic two robot builders Unimation and AMF both infringed this patent and ultimately a cash settlement was made to Kenward The owner of Unimation Inc was Joseph Engelberger an entrepreneur and avid reader of Isaac Asimov the writer who helped to create the image of the benevolent robot It is claimed that Engelberger s journey of fame down the road which led to him being hailed as the father of robotics can be traced to the day that he met George C Devol at a cocktail party Devol was an inventor with an impressive list of patents to his name in the electronics field One of Devol s patent applications referred to a Programmed Transfer Article Devol s patent was issued in 1961 as US Patent 2 988 237 and this formed the basis of the Unimate robot which first saw the light of day in 1960 The first Unimate was sold to Ford Motor Company which used it to tend a die casting machine It is perhaps ironic that the first robot was used by a

company which refused to recognise the machine as a robot preferring instead to call it a Universal Transfer Device **Fall**
