Scenario: Imagine yourself as a criminal investigator. You are working a case in which a patrol officer discovered a car that ran into a creek. There are skid marks on the road leading to the location where the car ran off of the road and into the creek. There is a decomposing, dead body in the driver's seat.

Questions: What needs to be determined by you and what type of math and science skills do you think you will be using?

Possible answers: Math to measure the skid marks in order to determine how fast the vehicle was traveling when it ran off the road, science to determine how long ago this accident occurred based on the stage of decomposition of the dead body, and science to determine if there are any alcohol or drugs in the driver's blood.
