implement DI and RTI for enhanced student achievement *International Handbook of Mathematical Learning Difficulties*
Annemarie Fritz,Vitor Geraldi Haase,Pekka Räsänen,2019-01-30 This comprehensive volume provides teachers researchers
and education professionals with cutting edge knowledge developed in the last decades by the educational behavioural and
neurosciences integrating cognitive developmental and socioeconomic approaches to deal with the problems children face in
learning mathematics The neurocognitive mechanisms and the cognitive processes underlying acquisition of arithmetic
abilities and their significance for education have been the subject of intense research in the last few decades but the most
part of this research has been conducted in non applied settings and there s still a deep discrepancy between the level of
scientific knowledge and its implementation into actual educational settings Now it s time to bring the results from the
laboratory to the classroom Apart from bringing the theoretical discussions to educational settings the volume presents a
wide range of methods for early detection of children with risks in mathematics learning and strategies to develop effective
interventions based on innovative cognitive test instruments It also provides insights to translate research knowledge into
public policies in order to address socioeconomic issues And it does so from an international perspective dedicating a whole
section to the cultural diversity of mathematics learning difficulties in different parts of the world All of this makes the
International Handbook of Mathematical Learning Difficulties an essential tool for those involved in the daily struggle to
prepare the future generations to succeed in the global knowledge society **Introduction to Diagnostic-prescriptive**
