Beyond the Bubble Maryann Wickett, Eunice Hendrix-Martin, 2011. Multiple choice testing is an educational reality. Rather than complain about the negative impact these tests may have on teaching and learning, why not use them to better understand your students' true mathematical knowledge and comprehension? Maryann Wickett and Eunice Hendrix Martin show teachers how to move beyond the student's answer, right or wrong, to uncover understanding and/or misconceptions. By asking a few simple follow-up questions, teachers can learn a great deal about student understanding and make better, more informed instructional decisions. The *Beyond the Bubble* books, grades 2-3 and grades 4-5, are each divided into five strands: number, measurement, algebra, geometry, and probability, with six problems per strand. Each problem includes an overview of the objective of the test question, a sample question typical of those found on standardized tests, strategies students employ to solve the problem, conversation starters, student work, student-teacher conversations, and instructional strategies to advance student learning. Teachers will also find suggestions for differentiation, reproducible sample questions, and a comprehensive list of additional resources. With dozens of sample test questions and numerous student samples, *Beyond the Bubble* shows educators how to use multiple choice tests to provide more purposeful, focused mathematics instruction for all of their students.

Teaching Dilemmas and Solutions in Content-Area Literacy, Grades 6-12 Peter

Smagorinsky, 2014-08-19. Because literacy is not just the English teacher's job, think literacy is just for English teachers. Not anymore. Nor should it be when you consider that each discipline has its own unique values and means of expression. These days, it's up to all teachers to communicate what it means to be literate in their disciplines. Here, finally, is a book ambitious enough to tackle the topic across all major subject areas. Engage in this cross-disciplinary conversation with seasoned teachers and university researchers and learn how to develop curriculum and instruction that are responsive to students' needs across English, language arts, science, social studies, mathematics, visual space, and music and drama. Peter Smagorinsky and his colleagues provide an insider's lens on both the states of their fields and their specific literacy demands, including reviews of current issues and state-of-the-art research informing literacy education. Scenario-based activities for reflection and discussion typify the dilemmas and challenges faced by practicing teachers. Considerations of the textual forms and conventions required in each discipline. Specific policy recommendations. Read this book on your own for immediate suggestions on how to improve literacy instruction within your course of study. Better yet, share it with colleagues and participate in a larger conversation about how your literacy expectations influence the ways students read and produce texts in other disciplines.
