So You Want a Meade LX Telescope! Lawrence Harris, 2010-07-20 Computers and Astronomy Perhaps every generation of astronomers believes that their telescopes are the best that have ever been They are surely all correct The great leap of our time is that computer designed and machined parts have led to more accurately made components that give the astronomer ever better views The manual skills of the craftsman mirror grinder have been transformed into the new age skills of the programmer and the machine maker The new products did not end the work of craftsman telescope makers though Many highly skilled amateur professional opticians continued to produce good quality mirrors that are still seen today Amateur priced telescopes are now capable of highly accurate tracking and computer control that were once only the province of professionals This has greatly increased the possibilities of serious astronomy projects for which tailor made software has been developed Add a CCD camera to these improved telescopes see Chap 3 and you bring a whole new dimension to your astronomy see Fig 1 1 Look Before You Leap But first a word of caution Unless you are already familiar with astronomy and basic telescopes it is not wise to start spending large amounts of money on a featured telescope Such an instrument might otherwise be subsequently abandoned due to a perceived overcomplexity coupled with a waning interest

Lunar and Planetary Webcam User's Guide Martin Mobberley, 2006-08-03 In the last few years cheap webcams have revolutionized amateur astronomy by providing a very inexpensive alternative to purpose made astronomical CCD cameras which use refrigerated imaging chips and are thus extremely expensive Webcams are capable of more advanced work than normal digital cameras because their simple construction makes it easy to remove the webcam's lens allowing it to be interfaced directly to a telescope Using a webcam is not difficult but most amateur astronomers who have tried to do this do not achieve the finest results despite the webcam's potential There are numerous imaging and image processing tricks and techniques and all of them are needed to get the best results Along with webcam technology has come simple to use image processing and enhancement using a PC the most powerful technique is stacking in which the best images out of hundreds are selected and summed automatically to provide startlingly good results *Lunar and Planetary Webcam User's Guide* demystifies the jargon of webcams and computer processing and provides detailed hints and tips for imaging the Sun Moon and planets with a webcam He looks at each observing target separately describing and explaining all specialised techniques in context Glance through the images in this book to see just how much you can easily achieve by using a webcam with your telescope **Astronomy Now**, 2008
