manifestations of inequality The experiences of marginalised groups can act as a resource for explaining contemporary political struggles over what sport means how it should be played and by whom and its place within wider society Central to this collection is the argument that the dynamics of cultural identities are contextually contingent influenced heavily by time and place and the extent to which they are embedded in the culture of their geographic location They also come to function differently within certain sites and institutions be it in one s everyday routine or leisure pursuits such as sport Among the themes and issues explored by the contributors to this volume are social inclusion and exclusion in relation to class race and ethnicity gender and sexuality social identities and authenticity social policy deviance and fandom This book was published as a special issue of Sport in Society *Sm Exploring MS Word 2000 I/M* Maryann Barber,Robert T. Taste and Healthy Eating in the Context of Well-being, Sustainability and 21st Century Food Science Hisayuki Uneyama,Ken Iwatsuki,Nobuyuki Sakai, Keiko Yasumatsu,2025-04-24 In the Anthropocene the global food system affects the geosystem and its biosphere and thus it is important for us to reconsider our eating style s and develop new and sustainable food systems This is particularly crucial since we are facing the risk of morbidity and mortality result from unhealthy diets In 2019 the EAT Lancet commission offered a new food standard that gratifies both health and environmental sustainability calling it the planetary health diet It is necessary for us to understand the sensory characteristics of the planetary health diet and how we humans select consume and develop foods and beverages to satisfy the standards of this new dietary approach These understandings add more fuel to promote the achievements of Sustainable Development Goals and of the planetary health diet This Research Topic aims to reveal the neural and biological mechanisms underlying the perception and selection of the planetary health diet Currently we have only little knowledge about taste and flavor perception so we do not know what sensory characteristics of foods are liked Also we do not know the mechanisms involved in selecting certain foods For example we know that excessive salt intake induces hypertension and or obesity but often we do not select low salt foods even when suffering from the high blood pressure We also know that animal models e g mice rats consume more of diets that impart a good taste for them As humans however we do not always eat so much of foods that may taste good for us and may consume foods or beverages that are not so enjoyable for us Thus a multidisciplinary approach is needed to challenge these topics **FNIRS in Neuroscience and its Emerging Applications** Ning Liu,Meryem Ayse Yücel,Yunjie Tong,Yasuyo
