Mammanna,V. Villani,2012-12-06 In recent years geometry seems to have lost large parts of its former central position in mathematics teaching in most countries However new trends have begun to counteract this tendency There is an increasing awareness that geometry plays a key role in mathematics and learning mathematics Although geometry has been eclipsed in the mathematics curriculum research in geometry has blossomed as new ideas have arisen from inside mathematics and other disciplines including computer science Due to reassessment of the role of geometry mathematics educators and mathematicians face new challenges In the present ICMI study the whole spectrum of teaching and learning of geometry is analysed Experts from all over the world took part in this study which was conducted on the basis of recent international research case studies and reports on actual school practice This book will be of particular interest to mathematics educators and mathematicians who are involved in the teaching of geometry at all educational levels as well as to researchers in mathematics education The Publishers Weekly ,1925 **Resources in Education** ,2001 *GeNeDis 2018* Panayiotis Vlamos,2020-05-28 The 3rd World Congress on Genetics Geriatrics and Neurodegenerative Disease Research GeNeDis 2018 focuses on recent advances in genetics geriatrics and neurodegeneration ranging from basic science to clinical and pharmaceutical developments It also provides an international forum for the latest scientific discoveries medical practices and care initiatives Advanced information technologies are discussed including the basic research implementation of medico social policies and the European and global issues in the funding of long term care for elderly people Colorado and Adjacent Areas David R. Rosenfeld,2012-09-08 The Russian edition of this book appeared in 1976 on the hundred and fiftieth anniversary of the historic day of February 23 1826 when Lobachevskii delivered his famous lecture on his discovery of non Euclidean geometry The importance of the discovery of non Euclidean geometry goes far beyond the limits of geometry itself It is safe to say that it was a turning point in the history of all mathematics The scientific revolution of the seventeenth century marked the transition from mathematics of constant magnitudes to mathematics of variable magnitudes During the seventies of the last century there occurred another scientific revolution By that time mathematicians had become familiar with the ideas of non Euclidean geometry and the algebraic ideas of group and field all of which appeared at about

the same time and the later ideas of set theory This gave rise to many geometries in addition to the Euclidean geometry previously regarded as the only conceivable possibility to the arithmetics and algebras of many groups and fields in addition to the arithmetic and algebra of real and complex numbers and finally to new mathematical systems i e sets furnished with various structures having no classical analogues Thus in the 1870 s there began a new mathematical era usually called until the middle of the twentieth century the era of modern mathematics
